6: Federal Transportation Control Measures for Ozone (TCMs A – E)

I. INTRODUCTION

The Metropolitan Transportation Commission (MTC) prepares a transportation air quality conformity analysis when MTC amends or updates its long-range regional transportation plan (RTP), or adds or deletes regionally significant, non-exempt projects into the Transportation Improvement Program (TIP).

The purpose of this conformity analysis is to conform the proposed Transportation 2035 Plan and proposed amendment to the 2009 Transportation Improvement Program (herein referred to as the 2009 TIP Amendment #09-06) in accordance with the latest U.S. EPA transportation conformity regulations and the Bay Area Conformity State Implementation Plan (Conformity SIP), which is also known as the Bay Area Air Quality Conformity Protocol (MTC Resolution No. 3757).

This report explains the basis for the conformity analysis and provides the results used by MTC to make a positive conformity finding on the Transportation 2035 Plan and 2009 Transportation Improvement Program (up through TIP Amendment #09-06).

Purpose of Conformity Analysis

The 1990 Clean Air Act Amendments (CAAA) outlines requirements for ensuring that federal transportation plans, programs and projects are consistent with ("conform to") the purpose of the State Implementation Plan (SIP). Conformity to the purpose of the SIP means that transportation activities will not cause new air quality violations, worsen existing violations, or delay timely attainment of the relevant national ambient air quality standards. A conformity finding demonstrates that the total emissions projected for a RTP or TIP are within the emissions limits ("budgets") established by the SIP, and that transportation control measures (TCMs) are implemented in a timely fashion.

Conformity applies to areas that are designated non-attainment, and those redesignated to attainment after 1990 ("maintenance areas" with plans developed under Clean Air Act section 175A) for ozone, particulate matter, carbon monoxide, and nitrogen oxide. The U.S. EPA published conformity regulations to implement the 1990 CAAA conformity requirements in November 1993, and revised them in August 1995, November 1995, August 1997, July 2004, and May 2005.

Metropolitan Planning Organizations such as MTC are required to adopt and follow these regulations. In the Bay Area, the procedures were first adopted in September 1994 to comply with the 1990 CAAA. Four subsequent amendments to the transportation conformity procedures in August 1995, November 1995, August 1997, and July 2006 have been adopted by the three co-lead agencies (MTC, Association of Bay Area Governments (ABAG), and Bay Area Air Quality Management District (BAAQMD)). MTC Resolution 3757 represents the latest San Francisco Bay Area Transportation Air Quality Conformity Protocol adopted by the three agencies in July 2006. Acting on behalf of the three agencies, the BAAQMD

submitted this latest Protocol to California Air Resources Board (CARB) as a revision to the Bay Area Conformity SIP. CARB approved this proposed revision to the Bay Area's Conformity SIP in December 2006, and transmitted it to U.S. EPA for final action. U.S. EPA approved the Bay Area Conformity SIP in December 2007 (40 CFR Part 42).

These regulations and resolutions state in part that, MTC cannot approve any transportation plan, program or project unless these activities conform to the purpose of the federal air quality plan (officially titled the State Implementation Plan, or SIP). "Transportation plan" refers to the RTP. "Program" refers to the TIP, which is a financially realistic set of highway and transit projects to be funded over the next four years. A "transportation project" is any highway or transit improvement, which is included in the RTP and TIP and requires funding or approval from the Federal Highway Administration or the Federal Transit Administration. Conformity regulations also affect regionally significant non-federally funded projects which must be included in a conforming transportation plan and program.

Status of Regional Transportation Plan

A Regional Transportation Plan, or RTP, is a long-range plan which includes both long-range and short-range strategies/actions that lead to the development of an integrated multimodal transportation system to facilitate the safe and efficient movement of people and goods in addressing current and future transportation demand. By federal law, the RTP covers a minimum planning horizon of 20 years and is updated every four years in areas which do not meet federal air quality standards. The RTP is financially constrained to the projected transportation revenues that will be reasonably available to the region over the planning period. Once adopted, the RTP guides the development of the TIP for the region.

The latest conforming RTP is the Transportation 2030 Plan, which was adopted by the Commission in February 2005 (MTC Resolution 3681). The Federal Highway Administration (FHWA) and Federal Transit Administration (FTA) approved MTC's conformity determination for the Transportation 2030 Plan on March 17, 2005. The Transportation 2030 Plan was subsequently amended on May 23, 2007 (MTC Resolution No. 3804) and on December 19, 2007 via an administrative modification. The FHWA and FTA issued a new conformity determination for the Transportation 2035 Plan, as amended, on June 14, 2007.

The proposed Transportation 2035 Plan is the 2009 update to the current Transportation 2030 Plan. This conformity analysis serves to conform the Transportation 2035 Plan.

The proposed Transportation 2035 Plan was prepared by MTC in partnership with the Association of Bay Area Governments (ABAG), Bay Area Air Quality Management District (BAAQMD), and Bay Conservation and Development Commission (BCDC) and in collaboration with federal and state agencies, Caltrans, nine county-level Congestion Management Agencies (CMAs), over two dozen Bay Area transit operators, and numerous transportation stakeholders and the public. The proposed Transportation 2035 Plan

represents the transportation policy and action statement of how the Bay Area will approach the region's transportation needs through the 2035 planning horizon year. The proposed Transportation 2035 Plan is financially constrained – meaning its funds for investments match with revenues projected to be reasonably available to the region over the next 25 years. The proposed Transportation 2035 Plan features a set of highway, transit, local roadway, bicycle and pedestrian projects identified through regional and local transportation planning process.

Refer to **Appendix B** for detailed project listing of projects/programs included in the proposed Transportation 2035 Plan. See MTC's Transportation 2035 Plan (April 2009) for full details about the plan.

Status of Transportation Improvement Program

The federally required Transportation Improvement Program, or TIP, is a comprehensive listing of Bay Area surface transportation projects that receive federal funds or are subject to a federally required action, or are considered regionally significant for air quality conformity purposes. MTC prepares and adopts the TIP every two years. The TIP must cover at least a four-year period and contain a priority list of projects grouped by year. The TIP is also financially constrained – meaning that the amount of funding programmed does not exceed the amount of funding reasonably expected to be available. Adoption of the TIP must be accompanied by an air quality conformity analysis and finding, and all projects included in the TIP must be derived from and/or be consistent with the RTP. Whenever a new RTP is adopted, a new air quality conformity analysis must be prepared for the TIP, to ensure consistency between the current Plan (RTP) and Program (TIP).

The latest conforming TIP is the 2009 TIP adopted by the Commission on May 28, 2008 (MTC Resolution No. 3875), and approved by the FHWA and FTA on November 17, 2008. The current 2009 TIP covers the four-year period from FY 2008-09 through FY 2011-12, and contains approximately 1,100 projects totaling about $13 billion dollars.

MTC has prepared Amendment #09-06 to the 2009 TIP to conform the 2009 TIP to the Transportation 2035 Plan for air quality conformity purposes. This amendment adds new sales tax projects, reconciles State Transportation Improvement Program (STIP) projects, and adds or deletes other exempt and non-exempt projects consistent with the new RTP. This conformity analysis serves to re-conform the entire 2009 TIP.

Refer to **Appendix A** for detailed project listing of projects/programs in the 2009 TIP Amendment #09-06. Note that specific funding sources are identified in the TIP amendment itself. See MTC's 2009 Transportation Improvement Program Amendment #09-06 (April 2009) for full details about the TIP.

II. BAY AREA AIR POLLUTANT DESIGNATIONS

National 1-Hour Ozone Standard

On November 6, 1991, the U.S. Environmental Protection Agency (EPA) designated the Bay Area as a moderate ozone non-attainment area. Based on "clean" air monitoring data from 1990 to 1993, the co-lead agencies—BAAQMD, MTC, and ABAG— determined that no ozone violations had occurred and requested the California Air Resources Board (ARB) to forward a redesignation request and an ozone maintenance plan to U.S. EPA.

On May 25, 1995, the Bay Area was classified as an ozone maintenance area, having attained the 1-hour national ozone standard for five years (1990-1994). However, on July 10, 1998 the U.S. EPA published a Notice of Final Rulemaking redesignating the Bay Area back to an ozone non-attainment (unclassified) area. This action was due to violations of the 1-hour standard that occurred during the summers of 1995 and 1996, and became final on August 10, 1998.

On October 31, 2003, U.S. EPA proposed a finding of attainment of the national 1-hour ozone standard for the Bay Area. The proposed finding was based on air quality monitoring data from the 2001, 2002, and 2003 ozone seasons. In April 2004, U.S. EPA made a final finding that the Bay Area had attained the national 1-hour ozone standard. Because of this finding, some of the elements of the 2001 Ozone Attainment Plan, submitted to EPA to demonstrate attainment of the 1-hour standard, were suspended. The finding of attainment did not mean the Bay Area had been reclassified as an attainment area for the 1-hour standard. To be reclassified, the region would have had to submit a formal redesignation request to EPA, along with a maintenance plan showing how the region would continue to attain the standard for ten years. However, this redesignation request was no longer necessary upon the establishment of the new national 8-hour ozone standard.

On April 15, 2004, EPA issued the first phase of the final implementation rule designating and classifying areas not meeting the federal 8-hour ozone standard. This phase of the implementation rule explained how EPA was classifying areas not meeting the national air quality standard for 8-hour ozone. It also established a process for transitioning from implementing the 1-hour standard for ozone to implementing the more protective 8-hour ozone standard. The rule also established attainment dates for the 8-hour standard and the timing of emissions reductions needed for attainment. The 8-hour designations and classifications took effect on June 15, 2004; and one year following this effective date, EPA revoked the 1-hour standard.

National 8-Hour Ozone Standard

In July 1997, U.S. EPA revised the ozone standard, setting it to 0.08 parts per million in concentration-based form, specifically the 3-year average of the annual 4th highest daily maximum 8-hour ozone concentrations. In April 2004, EPA issued final designations for attainment and non-attainment areas. The Bay Area monitoring stations recorded concentrations that exceeded the national 8-hour ozone standard for 2001, 2002 and 2003. In June 2004, EPA formally designated the Bay Area as a non-attainment area for national 8-hour ozone, and classified the region as "marginal" based on five classes of non-attainment areas for ozone, ranging from marginal to extreme. Marginal, non-attainment areas must attain the national 8-hour ozone standard by June 15, 2007.

On July 1, 2004, EPA published a final rule amending the transportation conformity rule to address the new national 8-hour ozone standard. The amended rule stated that Plans and TIPs in nonattainment areas must be found to conform against the new standard by one year after the effective date of designation – by June 15, 2005 for 8-hour ozone areas. Conformity for the 1-hour ozone standard will no longer apply in existing 1-hour ozone nonattainment and maintenance areas once the 1-hour ozone standard is revoked; this occurred on June 15, 2005. Furthermore, prior to 8-hour budgets being established, all areas with adequate or approved 1-hour motor vehicle emission budgets must use them to demonstrate conformity with the 8-hour ozone standard, unless it is determined through interagency consultation that using the interim emissions tests is more appropriate. The conformity finding in this report is based on the approved 1-hour motor vehicle emissions budget.

In March 2008, EPA lowered the national 8-hour ozone standard from 0.80 parts per million to 0.75 parts per million. On March 12, 2009, ARB submitted its recommendations for area designations for the revised national 8-hour ozone standard. These recommendations are based on ozone air quality data collected during 2006 through 2008. The ARB recommended that the Bay Area be designated as nonattainment for the national 8-hour ozone standard. EPA has one year to review the recommendations and will notify states by November 12, 2009 if they plan to modify the state-recommended areas. EPA will issue final designations by March 12, 2010. These final designations may be based on more recent monitoring data.

National 8-Hour Carbon Monoxide Standard

In April 1998, the Bay Area was redesignated to a "maintenance area" for the national 8-hour carbon monoxide (CO) standard, having demonstrated attainment of the standards. As a maintenance area, the region must assure continued attainment of the CO standard.

Approved Motor Vehicle Emissions Budgets

The Bay Area has conformity requirements for both the federal ozone and CO standards. Under these requirements, the Bay Area has to meet a motor vehicle emission "budget" test for Volatile Organic Compounds (VOC), Nitrogen Oxides (NO_X) and CO. To make a positive conformity finding, MTC must demonstrate that the calculated motor vehicle

emissions in the region are lower than the approved budgets. As mentioned above, under EPA's conformity rule for the national 8-hour ozone standard, the existing 1-hour motor vehicle emission budget is to be used for conformity analyses until it is replaced by another budget.

For the ozone precursor emissions VOC and NO_X, the applicable motor vehicle emissions budget was developed for the 2006 attainment year as part of the 2001 Ozone Attainment Plan and was subsequently approved by EPA.

For CO, the applicable motor vehicle emissions budget was developed for the 2004 Revisions to the California State Implementation Plan for Carbon Monoxide (herein referred to as the 2004 Carbon Monoxide Maintenance Plan).

The motor vehicle emission budgets are listed below:

VOC:	164 tons per day (2006 and beyond)
NOx:	270.3 tons per day (2006 and beyond)
CO:	1,850 tons per day (2003 and beyond)

On road motor vehicle emissions are analyzed for various analysis years that must not be more than 10 years apart, or more than 10 years from the base year used to validate the model (2000). For this conformity analysis, the analysis years are 2015, 2025, and 2035 for VOC and NOx. MTC has prepared separate travel forecasts for the Bay Area for each of these years. For CO, the analysis years are 2015, 2018, 2025, and 2035. Travel forecast data for year 2018 were interpolated between 2015 and 2025. These travel forecasts are then used to calculate motor vehicle emissions.

III. CONFORMITY ANALYSIS & RESULTS

Approach to Conformity Analysis

MTC has used the latest planning assumptions for the purpose of preparing this conformity analysis. Regional on-road motor vehicle emissions for future years are estimated using MTC's travel demand forecast model (BAYCAST 2000), which estimates vehicle activity in the Bay Area, in conjunction with the ARB's latest model for determining motor vehicle emissions (EMFAC2007, Version 2.3).

The MTC travel demand model requires various inputs – demographic assumptions, pricing assumptions, travel behavior assumptions and highway and transit network assumptions. This conformity analysis uses the latest socio-economic/land use forecast series *Projections 2007* developed and adopted by ABAG and the latest validated version of the MTC travel demand model (BAYCAST 2000).

In addition, pricing assumptions include projected parking prices, gasoline and non-gasoline auto operating costs, fuel economy, bridge tolls, and transit fares. Travel behavior

assumptions include trip peaking factors, vehicle occupancy factors, and estimates of interregional commuters. Highway and transit networks were updated for each analysis year to reflect investments in the proposed Transportation 2035 Plan (see Appendix B) and 2009 TIP Amendment #09-06 (see Appendix A).

Regional VMT and engine starts (which are needed for emission calculations) are forecasted using a combination of output from MTC's travel demand forecasting model and base year (2000) VMT information provided by the ARB. For conformity purposes, MTC agreed to follow ARB's protocol for estimating VMT.

Refer to **Appendix C** for detailed travel and air quality modeling assumptions used in this conformity analysis.

Consultation Process

MTC has consulted on the preparation of this conformity analysis and other conformity related issues with the Bay Area's Air Quality Conformity Task Force. The Conformity Task Force is composed of representatives of U.S. EPA, ARB, FHWA, FTA, Caltrans, MTC, BAAQMD, ABAG, the nine county Congestion Management Agencies, and Bay Area transit operators. The Conformity Task Force reviews the assumptions going into the analysis, consults on TCM implementation issues, and reviews the results of the conformity analysis. The task force meetings are open to the public and are regularly attended by interested members of the public. Topics covered in past meetings of the Air Quality Conformity Task Force include the following:

June 2008

- Transportation 2035 Update
- Approach, Assumptions, and Schedule for the Conformity Analysis for the Transportation 2035 Plan and 2009 Transportation Improvement Program Amendment #09-06
- Air Quality Updates

December 2008

- Transportation 2035 Update
- Administrative Draft Conformity Analysis for the Transportation 2035 and 2009 Transportation Improvement Program Amendment #09-06
- Interagency Consultation Requirements for $PM_{2.5}$ HOT Spot Analysis
- Overview of ABAG's Projections 2009
- Air Quality Updates

February 2009

- Transportation 2035 Update
- Response to Comments & Proposed Final Conformity Analysis for the Transportation 2035 Plan and 2009 Transportation Improvement Program Amendment #09-06
- Air Quality Updates

Comparison of Motor Vehicle Emissions To Budgets

As explained earlier, motor vehicle emissions budgets are established in the SIP for VOCs, NO_x and carbon monoxide (CO). To make a positive conformity finding, the regional motor vehicle emissions must be equal to or less than these budgets. The results of the vehicle activity forecasts and motor vehicle emission calculations are shown below for each separate analysis year. For VOC and NO_x, the motor vehicle emission budget also reflects anticipated emission reductions from five Transportation Control Measures (TCMs) incorporated in the 2001 Ozone Attainment Plan (Table 1).

TABLE 1
VOC AND NO_X EMISSIONS BUDGETS FROM 2001 OZONE ATTAINMENT PLAN (TONS/DAY)

VOC	
2006 On Road Motor Vehicle Emissions	168.5
2006 Mobile Source Control Measure Benefits	(4.0)
2006 TCM Benefits	(0.5)
2006 Emissions Budget	164.0
NO_X	
2006 On Road Motor Vehicle Emissions	271.0
2006 TCM Benefits	(0.7)
2006 Emissions Budget	270.3

TABLE 2
VEHICLE ACTIVITY FORECASTS

	2015	2025	2035
VEHICLES IN USE	5,457,800	6,102,453	6,693,633
Daily VMT (1000s)	173,560	191,718	209,785
Engine Starts	36,181,142	40,134,461	43,911,799

Carbon Monoxide Maintenance Plan Budget

The budget for carbon monoxide is derived from the 2004 Carbon Monoxide Maintenance Plan. The emission budget for the Bay Area is 1,850 tons per day. This budget applies to all subsequent analysis years as required by federal conformity regulation, including: any interim year conformity analyses, the 2018 horizon year, and years beyond 2018.

Comparison of Estimated Regional Motor Vehicle Emissions to the Budget

The motor vehicle activity forecasts for the Transportation 2035 Plan and 2009 TIP Amendment #09-06 for the various horizon years are converted to motor vehicle emission estimates by MTC using EMFAC2007.

Table 3A and 3B compares the results of the various analyses with the applicable budgets. The analyses indicate that the motor vehicle emissions are substantially below the budget, due in large part to recent improvements in ARB's latest EMFAC model which reflect the effects of cleaner vehicles in the California fleet and the enhanced Smog Check program now in effect in the Bay Area. With respect to the new Maintenance Plan motor vehicle emission budget for CO, Table 3B shows that calculated motor vehicle emissions will be well below the new budget of 1,850 tons per day in 2018 as well.

The estimated effectiveness of the various Transportation Control Measures, given their current implementation status is shown in Table 4. TCMs A through E are fully implemented. They have achieved the required cumulative total emission reductions of 0.5 tons per day of VOC and 0.7 tons per day of NO_x by 2006.

TABLE 3A
EMISSIONS BUDGET COMPARISONS FOR OZONE PRECUSORS (TONS/DAY)

Year	VOC Budget*	On-Road Motor Vehicles VOC	TCMs**	Net Emissions
2015	164.0	72.54	(0.3)	72.24
2025	164.0	49.06	(0.3)	48.76
2035	164.0	37.21	(0.3)	36.91

Year	NO_X Budget*	On-Road Motor Vehicles NO_X	TCMs**	Net Emissions
2015	270.3	108.39	(0.5)	107.89
2025	270.3	59.58	(0.5)	59.08
2035	270.3	42.83	(0.5)	42.33

**2001 Ozone Attainment Plan*
**The transit services for TCM A Regional Express Bus Program were modeled. The emission benefits from TCM A are therefore included in the On-Road Motor Vehicles VOC and NOx emission inventories for 2006 and beyond.

TABLE 3B
EMISSIONS BUDGET COMPARISONS FOR CARBON MONOXIDE (TONS/DAY)

Year	2004 CO Budget*	Estimated CO
2015	1,850	611.82
2018	1,850	532.94**
2025	1,850	348.89
2035	1,850	268.72

**2004 Revision to the California State Implementation Plan for Carbon Monoxide, Updated Maintenance Plan for 10 Federal Planning Areas*
***Estimated CO emissions for 2018 is extrapolated from the 2015 and 2025 analysis years.*

TABLE 4
EMISSIONS REDUCTIONS FOR TRANSPORTATION CONTROL MEASURES (TCMS) A – E IN STATE IMPLEMENTATION PLAN THROUGH DECEMBER 2006 (TONS PER DAY)

TCM	VOC Emission Reductions through December 2006	NOx Emission Reductions through December 2006
TCM A Regional Express Bus Program	0.20	0.20
TCM B Bicycle/Pedestrian Program	0.04	0.03
TCM C Transportation for Livable Communities	0.08	0.12
TCM D Expansion of Freeway Service Patrol	0.10	0.25
TCM E Transit Access to Airports	0.09	0.13
Total Reductions	0.5	0.7

IV. TRANSPORTATION CONTROL MEASURES

History of Transportation Control Measures

Transportation control measures (TCMs) are strategies to reduce vehicle emissions. They include such strategies as improved transit service and transit coordination, ridesharing services and new carpool lanes, signal timing, freeway incident management, increased gas taxes and bridge tolls to encourage use of alternative modes, etc. The original set of TCMs plus the five new TCMs (A-E) have been fully implemented. The TCMs were added over successive revisions to the SIP (see Table 5). For more information on TCMs 1-28, which are completed, see the *Transportation Air Quality Conformity Analysis for the 2001 Regional Transportation Plan and FY 2001 Transportation Improvement Program Amendment 01-32 (February 2002)*. This report can be found in the MTC/ABAG Library.

- Twelve (12) ozone measures were originally listed in the 1982 Bay Area Air Quality Plan.

- In response to a 1990 lawsuit in the federal District Court, sixteen (16) additional TCMs were subsequently adopted by MTC in February 1990 as contingency measures to bring the region back on the "Reasonable Further Progress" (RFP) line. The Federal District order issued on May 11, 1992, found that these contingency TCMs were sufficient to bring the region back on the RFP track anticipated in the SIP. These measures became part of the SIP when U.S. EPA approved the 1994 Ozone Maintenance Plan.

- Two (2) transportation control measures from the 1982 Bay Area Air Quality Plan apply to Carbon Monoxide control strategies, for which the region is in attainment with the federal standard, and primarily targeted downtown San Jose (which had the

most significant CO problem at that time.) MTC also adopted a set of TCM enhancements in November 1991 to eliminate a shortfall in regional carbon monoxide emissions identified in the District Court's April 19, 1991 order. Carbon monoxide standards have been achieved primarily through the use of oxygenated/reformulated fuels in cars and with improvements in the Smog Check program.

- As part of EPA's partial approval/partial disapproval of the 1999 Ozone Attainment Plan, four (4) TCMs were deleted from the ozone plan (but two of these remain in the Carbon Monoxide Maintenance Plan).

- Five (5) new Transportation Control Measures were adopted as part of the new 2001 1-Hour Ozone Attainment Plan and are fully funded in the TIP and 2001 Regional Transportation Plan.

With respect to TCM 2 from the 1982 SIP, there has been a protracted debate, leading to a citizens lawsuit in federal court, about the obligations associated with this TCM. On April 6, 2004 MTC prevailed in the U.S. Court of Appeals for the Ninth Circuit which concluded that TCM 2 does not impose any additional enforceable obligation on MTC to increase ridership on public transit ridership by 15% over 1982-83 levels by November 2006 (Bayview Hunters Point Community Advocates v. Metropolitan Transportation Com'n, (2004 WL 728247, 4 Cal. Daily Op. Serv. 2919, 2004 Daily Journal D.A.R. 4209, 9th Cir.(Cal.), Apr 06, 2004)). Thus TCM 2 has been resolved, and there are no further implementation issues to address in this TCM.

TABLE 5
Transportation Control Measures (TCMs) in the State Implementation Plan

TCM	*Description*
Original TCMs from 1982 Bay Area Air Quality Plan	
TCM 1	Reaffirm Commitment to 28 percent Transit Ridership Increase Between 1978 and 1983
TCM 2	Support Post-1983 Improvements in the Operators' Five-Year Plans and, After Consultation with the Operators, Adopt Ridership Increase Target for the Period 1983 through 1987
TCM 3	Seek to Expand and Improve Public Transit Beyond Committed Levels
TCM 4	High Occupancy Vehicle (HOV) Lanes and Ramp Metering
TCM 5	Support RIDES Efforts
TCM 6*	Continue Efforts to Obtain Funding to Support Long Range Transit Improvements
TCM 7	Preferential Parking
TCM 8	Shared Use Park and Ride Lots
TCM 9	Expand Commute Alternatives Program
TCM 10	Information Program for Local Governments
TCM 11**	Gasoline Conservation Awareness Program (GasCAP)
TCM 12**	Santa Clara County Commuter Transportation Program
Contingency Plan TCMs Adopted by MTC in February 1990 (MTC Resolution 2131)	
TCM 13	Increase Bridge Tolls to $1.00 on All Bridges
TCM 14	Bay Bridge Surcharge of $1.00
TCM 15	Increase State Gas Tax by 9 Cents
TCM 16*	Implement MTC Resolution 1876, Revised — New Rail Starts
TCM 17	Continue Post-Earthquake Transit Services
TCM 18	Sacramento-Bay Area Amtrak Service
TCM 19	Upgrade Caltrain Service
TCM 20	Regional HOV System Plan
TCM 21	Regional Transit Coordination
TCM 22	Expand Regional Transit Connection Ticket Distribution
TCM 23	Employer Audits
TCM 24	Expand Signal Timing Program to New Cities
TCM 25	Maintain Existing Signal Timing Programs
TCM 26	Incident Management on Bay Area Freeways
TCM 27	Update MTC Guidance on Development of Local TSM Programs
TCM 28	Local Transportation Systems Management (TSM) Initiatives
New TCMs in 2001 Ozone Attainment Plan	
TCM A	Regional Express Bus Program
TCM B	Bicycle/Pedestrian Program
TCM C	Transportation for Livable Communities
TCM D	Expansion of Freeway Service Patrol
TCM E	Transit Access to Airports

*Deleted by EPA action from ozone plan
**Deleted by EPA action from ozone plan, but retained in Carbon Monoxide Maintenance Plan.

Source: Bay Area Air Quality Management District, Metropolitan Transportation Commission, 2001.

Status of Transportation Control Measures

TCMs A-E were approved into the SIP as part of EPA's Finding of Attainment for the San Francisco Bay Area (April 2004). The conformity analysis must demonstrate that TCMs are being implemented on schedule (40 CFR 93.113). TCMs A-E have specific implementation steps which are used to determine progress in advancing these TCMs (see Table 6). TCMs A-E are now fully implemented.

TABLE 6
IMPLEMENTATION STATUS OF FEDERAL TRANSPORTATION CONTROL MEASURES FOR OZONE (TCMS A – E)

#	TCM	Description	Ozone Attainment Plan Implementation Schedule	Implementation Status
A	Regional Express Bus Program	Program includes purchase of approximately 90 low emission buses to operate new or enhanced express bus services. Buses will meet all applicable ARB standards, and will include particulate traps or filters. MTC will approve $40 million in funding to various transit operators for bus acquisition. Program assumes transit operators can sustain service for a five year period. Actual emission reductions will be determined based on routes selected by MTC.	FY 2003. Complete once $40 million in funding pursuant to Government Code Section 14556.40 is approved by the California Transportation Commission and obligated by bus operators	$40 million for this program was allocated by the CTC in August 2001. The participating transit operators have ordered and received a total of 94 buses. All buses are currently in operations. TCM A is fully implemented.
B	Bicycle / Pedestrian Program	Fund high priority projects in countywide plans consistent with TDA funding availability. MTC would fund only projects that are exempt from CEQA, have no significant environmental impacts, or adequately mitigate any adverse environmental impacts. Actual emission reductions will be determined based on the projects funded.	FY 2004 – 2006. Complete once $15 million in TDA Article 3 is allocated by MTC.	MTC allocated over $20 million in TDA Article 3 funds during FY2004, FY2005, and FY2006. TCM B is fully implemented.

#	TCM	Description	Ozone Attainment Plan Implementation Schedule	Implementation Status
C	Transportation for Livable Communities (TLC)	Program provides planning grants, technical assistance, and capital grants to help cities and nonprofit agencies link transportation projects with community plans. MTC would fund only projects that are exempt from CEQA, have no significant environmental impacts, or adequately mitigate any adverse environmental impacts. Actual emission reductions will be based on the projects funded.	FY 2004 – 2006. Complete once $27 million in TLC grant funding is approved by MTC	In December 2003, the Commission reaffirmed its commitment of $27 million annually over 25 years for the TLC program as part of Phase 1 of the Transportation 2030 Plan. MTC and the county Congestion Management Agencies (CMAs) have approved over $27 million in TLC grant funding by FY 2006. In November 2004, MTC approved $500,000 for regional TLC Community Design Planning Program, and in December 2004, MTC approved $18.4 million in TLC funding for the regional TLC Capital program. As of December 2006, CMAs in Alameda, Marin and Sonoma counties approved an additional $12.4 million in their county-level TLC Capital programs for a regional total of $31.2 million. TCM C is fully implemented.
D	Additional Freeway Service Patrol	Operation of 55 lane miles of new roving tow truck patrols beyond routes which existed in 2000. TCM commitment would be satisfied by any combination for routes adding 55 miles. Tow trucks used in service are new vehicles meeting all applicable ARB standards.	FY 2001. Complete by maintaining increase in FSP mileage through December 2006	FSP continues to maintain the operation of the 55 lane miles of new roving tow truck coverage. This level of service was maintained through 2006. FSP continues to expand its service areas. TCM D is fully implemented. .
E	Transit Access to Airports	Take credit for emission reductions from air passengers who use BART to SFO, as these reductions are not included in the Baseline.	BART – SFO service to start in FY 2003. Complete by maintaining service through December 2006	Service began June 2003. Service adjustments have been made since start of revenue service. The BART to SFO service has been maintained through 2006 and is continued. TCM E is fully implemented.

V. RESPONSE TO PUBLIC COMMENTS

MTC's Planning Committee released the Draft Conformity Analysis for a 30-day public review period from January 9, 2009 to February 9, 2009. MTC received one comment letter on the Draft Conformity Analysis (see Appendix E). MTC's responses to comments are as follows:

Commenter: David Schonbrunn, TRANSDEF (Letter dated January 20, 2009)

Comment #1
As regards the TIP Amendment, what due diligence has been performed on the cost estimate of the "BART to Warm Spring to San Jose Extension" (sic) project that makes up over half of the Grand Total of $11.69 billion of projects being added to the TIP? What was the year of the cost estimate that was escalated into $6.1 billion in Year of Expenditure dollars? Can MTC confirm that this is the most recent cost estimate? We are aware that VTA completed 65% design-level cost estimates last year, which were withheld from the public during the campaign for Santa Clara County's Measure B.

Response #1
As part of the 3434 Strategic Plan, MTC staff requested and received an update on the cost estimate for the BART to San Jose project from VTA staff. This cost estimate is $6.1 billion in year of expenditure dollars. Note that VTA staff provided the cost estimate in year of expenditure dollars, and thus MTC staff did not escalate this cost estimate. We confirmed with VTA staff that this was the most recent and accurate cost estimate available to date. Additionally, on September 17, 2008, the California Transportation Commission approved the following item related to Traffic Congestion Relief Program funding, which reflects the $6.1 billion cost estimate for the BART to San Jose project: http://www.dot.ca.gov/hq/transprog/ctcbooks/2008/0908/47_2.1a2.pdf.[1]

Comment #2
In looking at Appendix B, the listing of projects is very heavily front-loaded. It seems unlikely that so many projects can be "Complete and Operational by 2015." Please advise as to whether the phasing of projects will affect the model outputs for the various analysis years enough to change the Conformity Analysis.

Response #2
Project sponsors submitted project schedule information, including the start and end dates for each project development phase, as part of the project submittal for the Transportation 2035 Plan. MTC then aligns the project schedule information with the appropriate analysis years (2015, 2025, or 2035). Should there be project phasing, we assume that the phase of that project is a complete and operable segment; so therefore, we do not view phasing of projects to have an affect on model outputs for the various analysis years.

[1] On February 27, 2009, the Santa Clara VTA staff presented a revised cost estimate of $7.6 billion based on 65% design to their board.

Comment #3
We believe a better choice for the gasoline price assumption used in modeling would be the result from the 5 year linear regression model. This 5 year period has had far greater gas price volatility than the 10 year period that was chosen for the Conformity Analysis and RTP EIR. We expect gas prices to fluctuate much more in the future than they have in the past, due to the clash between the flattening of global oil production and exponentially growing demand.

The issue here is not accurate prediction—the issue is risk management, and making sure that MTC has created the most resilient plan possible to enable Bay Area residents to cope with large changes in the cost of transportation. Please remember that many consider the root of the current home foreclosure crisis to be the extraordinary jump in gasoline prices, which made mortgages unaffordable for many when coupled with the high cost of commuting from the urban fringe.

Response #3
The gas price assumption used by MTC in its travel forecasts is an honest assessment of trends based on historical and current gas prices in the Bay Area over a twenty-year time period. MTC staff discussed this model assumption with the Air Quality Conformity Task Force on June 9, 2008, and the Conformity Task Force noted that the assumption appears reasonable (in the context of when it was produced in spring of 2008) for use in preparing forecasts for the Transportation 2035 Plan. See a summary of the meeting notes from the June 18, 2008 Air Quality Conformity Task Force meeting at: http://apps.mtc.ca.gov/meeting_packet_documents/agenda_1184/6-09-08_summarynotes_2.pdf.

In January 2009, the California Energy Commission (CEC) published a report titled *Transportation Fuel Price and Demand Forecasts: Inputs and Methods for the 2009 Integrated Energy Policy Report* which projects year 2030 gasoline prices, ranging from a low of $3.34 per gallon to a high of $4.78 per gallon, in 2008 dollars. The current gas price forecasts produced by the CEC are substantially lower than the trend-line projection used by MTC in production of the DEIR. For more information, see the CEC's report at: http://www.energy.ca.gov/2009publications/CEC-600-2009-001/CEC-600-2009-001-SD.PDF.

Comment #4
We are pleased to see that MTC has agreed with our suggestion that bridge tolls should escalate with inflation, in the same manner as transit fares are escalated.

Response #4
Comment noted.

Comment #5
We raise again the comment we have raised in past plans: Using VMT derived from ARB data sources places larger traffic volumes into speed buckets for the EMFAC model than are derived from the model at equilibrium. We therefore don't have confidence in the emissions projections, because we don't believe that these traffic volumes can physically occur as modeled.

Response #5
Commented noted. In November 2001, MTC and the California Air Resources Board agreed to a methodology for Bay Area conformity determinations, and MTC follows this protocol. See Appendix F for CARB letter dated November 30, 2001 detailing the methodology for Bay Area conformity determinations.

Comment #6
We never accepted the MTC assertion that the programming of funds for the Express Buses under TCM A constitutes full implementation of the TCM. Know that "the buses ordered….will be redeployed in alternative services" is inadequate for us. Please provide a listing of where the Express Buses purchased under TCM A have been deployed, as well as the number of vehicle revenue hours each of them has accumulated.

Response #6
As stated on p. 38 of the 2001 Ozone Attainment Plan, TCM A is complete once $40 million in funding pursuant to Government Code Section 14556.40 is approved by the California Transportation Commission and obligated by bus operators. The CTC approved the $40 million in August 2001, and funds were obligated by bus operators from March 2001 through January 2003. The routes, run-times and headways for these express buses are included in MTC travel forecasting models. MTC does not have information about the number of vehicle revenue hours for each express bus. See Appendix D for the listing of express buses and service routes.

Comment #7
Table 6 is incorrect when it comes to TCM E. Changes in service to Millbrae and other Peninsula stations on the BART SFO extension bring into question whether TCM E is still fully implemented. Please provide a complete narrative of changes in service on the SFO extension, and correct the statement "Service was maintained through 2006 and is continued."

Response #7
The BART to San Francisco International Airport (SFO) service began in June 2003, and while service adjustments have been made since the start of revenue service through December 2006 (see Appendix D for the BART document titled "SFO Changes Overtime"), the BART to SFO service remains in operation. Route service adjustments were made in response to changes in market demand and resources. The implementation status for TCM E has been updated as shown in Table 6.

VI. CONFORMITY FINDINGS

Based on the analysis, the following conformity findings are made:

- This conformity assessment was conducted consistent with U.S. EPA's transportation conformity regulations and with the Bay Area Air Quality Conformity Protocol adopted by MTC as Resolution No. 3757.

- The proposed Transportation 2035 Plan and 2009 Transportation Improvement Program Amendment #09-06 provide for implementation of TCMs pursuant to the following federal regulation:

  (1) An examination of the specific steps and funding source(s) needed to fully implement each TCM indicates that TCMs which are eligible for funding under title 23 U.S.C. or the Federal Transit Laws are on or ahead of the schedule established in the applicable implementation plan, or, if such TCMs are behind the schedule established in the applicable implementation plan, the MPO and DOT have determined that past obstacles to implementation of the TCMs have been identified and have been or are being overcome, and that all State and local agencies with influence over approvals or funding for TCMs are given maximum priority to approval or funding to TCMs over other projects within their control, including projects in locations outside the non-attainment or maintenance area.

  (2) If TCMs in the applicable implementation plan have previously been programmed for Federal funding but the funds have not been obligated and the TCMs are behind the schedule in the implementation plan, then the TIP cannot be found to conform if the funds intended for those TCMs are reallocated to projects in the TIP other than TCMs, or if there are no other TCMs in the TIP, if the funds are reallocated to projects in the TIP other than projects which are eligible for Federal funding intended for air quality improvements projects, e.g., the Congestion Mitigation and Air Quality Improvement Program.

  (3) Nothing in the TIP may interfere with the implementation of any TCM in the applicable implementation plan. (40 CFR Part 93.113(c)).

- For carbon monoxide, motor vehicle emissions in the proposed Transportation 2035 Plan and 2009 Transportation Improvement Program Amendment #09-06 are lower than the transportation conformity budget in the SIP.

- For Volatile Organic Compounds (VOC) and Nitrogen Oxides (NOx), motor vehicle emissions in the proposed Transportation 2035 Plan and 2009 Transportation Improvement Program Amendment #09-06 are also lower than the applicable motor vehicle emission budgets for the national 8-hour ozone standard.

Appendix A
List of Projects in the 2009 TIP Amendment #09-06

Appendix A: 2009 TIP Amendment #09-06 Projects (sorted by County, then by Sponsor)

County	Sponsor	TIP ID	RTP ID	Project name	Description of Change	Project Completion Date	Total Project Cost in the TIP
				Alameda County			
Alameda	Alameda County	ALA030002	21139	Vasco Road Safety Improvements	Increase projects limits from 1.9M to 4.4 miles. No net change in funding	2015	$ 34,035,000
Alameda	ACCMA	ALA070018	21116, 230665	I-580 (TriValley) Corridor - WB HOV/HOT lanes & connectors	Revise project scope to include "HOV/HOT Lanes" and increase project limits approx. 3 miles to Foothill Road	2015	$ 129,358,000
Alameda	ACCMA	ALA070020	21116, 230666	I-580 (TriValley) Corridor - EB HOV/HOT Lanes	Revise project scope to include "HOV/HOT Lanes" and increase project limit approx. 1 mile to Hacienda Road	2015	$ 197,978,000
Alameda	ACCMA	ALA090003	230099	I-580/I-680 Improvements	Amend in new project	2015	$ 392,500,000
Alameda	ACCMA	ALA090004	230665	I-580 Corridor Project	Amend in new project	2010	$ 30,000,000
Alameda	ACCMA	ALA090005	22765	Project Development for I-580/I-680 Interchange HOV direct connectors	Amend in new project	2015	$ 15,000,000
Alameda	City of Livermore	ALA090006	230156	W. Jack London Blvd. Extension, west of Isabel/Route 84 to El Charro Rd.	Amend in new project	2010	$ 18,000,000
Alameda	City of Livermore	ALA090007	21475	I-580/First Street Interchange Improvements	Amend in new project	2015	$ 37,000,000
Alameda	City of Livermore	ALA090008	21477	I-580/Greenville Road Interchange Improvements	Amend in new project	2015	$ 43,000,000
Alameda	Pleasanton	ALA090009	230244	SR 84 Widening from Pigeon Pass to I-680	Amend in new project	2011	$ 2,100,000
Alameda	Pleasanton	ALA090010	21472	VI-680/Bernal Avenue interchange improvements	Amend in new project	2014	$ 16,000,000
Alameda	ACCMA	ALA090011	230703	I-680 Express Bus Service	Amend in new project	2015	$ 10,400,000
Alameda	San Leandro	ALA090012	230066	I-880/Marina Blvd Interchange and Overcrossing Replacement	Amend in new project	2013	$ 33,000,000
Alameda	Pleasanton	ALA090013	21489	I-580 / Foothill Road interchange improvements	Amend in new project	2011	$ 2,100,000
Alameda	Emeryville	ALA090014	230108	I-80 Eastbound Off-ramp Widening at Powell Street	Amend in new project	2015	$ 1,800,000
Alameda	City of Union City	ALA090015	21123	Union City Intermodal Station infrastructure improvements (Phase 2)	Amend in new project	2015	$ 21,000,000
Alameda	City of Hayward	ALA090016	21093	Rt 92/Clawiter/Whitesell Interchange Improvements	Amend in new project	2015	$ 51,900,000
Alameda	City of Alameda	ALA090017	22766	Fruitvale Avenue Rail Bridge seismic retrofit	Amend in new project	2013	$ 2,600,000

County	Sponsor	TIP ID	RTP ID	Project name	Description of Change	Project Completion Date	Total Project Cost in the TIP
Alameda	ACCMA	ALA090018	230120	Truck Parking Facilities in North County (Planning Area 1)	Amend in new project	2015	$ 5,000,000
Alameda	ACCMA	ALA090019	230091	Central Alameda County Integrated Corridor Mobility Program and Adaptive Ramp Metering	Amend in new project	2015	$ 5,000,000
Alameda	City of Hayward	ALA090020	230054	I-880 Auxiliary Lanes between Whipple and Industrial Parkway West	Amend in new project	2015	$ 19,500,000
Alameda	City of Hayward	ALA090021	230052	I-880 NB and SB auxiliary lanes	Amend in new project	2015	$ 32,500,000
Alameda	Alameda County	ALA090022	22768	Estuary Bridges Seismic Retrofit and Repairs	Amend in new project	2010	$ 4,000,000
Alameda	Alameda County	ALA090023	22783	Fruitvale Avenue Roadway Bridge Seismic Retrofit	Amend in new project	2013	$ 8,000,000
Alameda	ACCMA	ALA090024	22780	Webster Street SMART Corridor Management Project	Amend in new project	2015	$ 1,234,000
Alameda	ACCMA	ALA090025	230608	I-580 WB Auxiliary Lane, First to Isabel	Amend in new project	2015	$ 1,000,000
Alameda	Port of Oakland	ALA090026	22760	Outer Harbor Intermodal Terminals (OHIT)	Amend in new project	2015	$ 220,000,000
Alameda	Port of Oakland	ALA090027	22082	Reconstruct 7th Street/Union Pacific Railroad grade separation	Amend in new project	2015	$ 350,000,000
Alameda	Caltrans	ALA090028	22013	Eastbound Truck Climbing Lane	Amend in new project	2015	$ 64,265,000
Contra Costa County							
Contra Costa	AC Transit	CC-090012	94045	Procure New Express Buses for I-80 HOV	Amend in new project	2010	$ 10,000,000
Contra Costa	AC Transit	CC-090014	98157	Enhanced Bus - San Pablo Corridor	Amend in new project	2012	$ 17,500,000
Contra Costa	AC Transit	CC-090027	230090	Expand Western Contra Costa County Transit Facilities	Amend in new project	2011	$ 20,000,000
Contra Costa	AC Transit	CC-090028	230193	Zero Emission Buses and Infrastructure Improvements	Amend in new project	2015	$ 30,000,000
Contra Costa	AC Transit	CC-090029	230194	Environmental Sustainability Program	Amend in new project	2015	$ 6,070,000
Contra Costa	AC Transit	CC-090030	230195	Safety and Security Enhancements	Amend in new project	2011	$ 4,200,000
Contra Costa	AC Transit	CC-090031	230196	San Pablo Dam Road Transit Priority Measures	Amend in new project	2011	$ 12,000,000
Contra Costa	Amtrak	CC-090032	22089	Martinez At-Grade Connector	Amend in new project	2015	$ 35,000,000
Contra Costa	Caltrans	CC-090010	230631	Double the existing rail track between Oakley and Port Chicago	Amend in new project	2012	$ 28,071,000
Contra Costa	City of Antioch	CC-090011	230253	Fitzuren Rd Widening and Realignment	Amend in new project	2012	$ 10,000,000
Contra Costa	City of Antioch	CC-090013	230232	Construct new interchange at Route 4/Phillips Lane	Amend in new project	2014	$ 50,100,000
Contra Costa	City of Brentwood	CC-090021	230250	Widen Brentwood Boulevard from 2 lanes to 4 lanes between Sunset Court and Lone Tree Way	Amend in new project	2014	$ 23,536,000
Contra Costa	City of Concord	CC-090023	230212	Clayton Road/Treat Boulevard Intersection Improvements	Amend in new project	2012	$ 2,091,000

County	Sponsor	TIP ID	RTP ID	Project name	Description of Change	Project Completion Date	Total Project Cost in the TIP
Contra Costa	City of Concord	CC-090026	98115	Ygnacio Valley/Kirker Pass Roads Widening from Michigan Blvd to Cowell Rd	Amend in new project	2014	$ 8,172,000

County	Sponsor	TIP ID	RTP ID	Project name	Description of Change	Project Completion Date	Total Project Cost in the TIP
Contra Costa	City of Hercules	CC-090008	230225	Central Hercules Arterial Improvements	Amend in new project	2012	$ 7,736,000
Contra Costa	City of Hercules	CC-090009	230321	Construct Phase 2 of Hercules Intermodal Station	Amend in new project	2015	$ 13,400,000
Contra Costa	City of Martinez	CC-090016	22614	Construct Martinez Intermodal Station (Phase 3)	Amend in new project	2012	$ 14,200,000
Contra Costa	City of Oakley	CC-090015	230274	Widen Main Street to 6 lanes from State Route 160 to Big Break Road	Amend in new project	2015	$ 12,630,000
Contra Costa	City of Pinole	CC-090017	230229	Widen Pinole Valley Road ramps at I-80	Amend in new project	2013	$ 787,000
Contra Costa	City of Richmond	CC-030001	21208	Richmond Parkway Transit Center	Amend scope to state "provide upto 800 parking spaces"	2014	$ 30,500,000
Contra Costa	City of Richmond	CC-090018	230084	Marina Bay Parkway Grade Separation	Amend in new project	2014	$ 37,770,000
Contra Costa	City of Richmond	CC-090025	230505	East Side Improvements Richmond Intermodal Station	Amend in new project	2012	$ 16,087,000
Contra Costa	City of San Pablo	CC-070035	22360	I-80 / San Pablo Dam Road Interchange Modifications	Amend scope to include modifying adjacent interchanges	2015	$ 118,000,000
Contra Costa	City of San Ramon	CC-070036	22352	I-680/Norris Canyon Bus Ramps	Amend scope to include reconstruction of overcrossing and widening of median	2015	$ 101,600,000
Contra Costa	City of San Ramon	CC-090020	98132	Bollinger Canyon Rd Widening from Alcosta Blvd to Dougherty Rd	Amend in new project	2015	$ 4,670,000
Contra Costa	City of San Ramon	CC-090022	230307	Widen Camino Tassajara Road from Windemere Parkway to the Alameda/Contra Costa Countyline	Amend in new project	2013	$ 13,020,000
Contra Costa	City of San Ramon	CC-090019	22613	Bollinger Canyon Road Widening (Alcosta to SRVB)	Amend in new project	2012	$ 21,900,000
Contra Costa	Contra Costa County	CC-090024	98134	Dougherty Rd Widening from Red Willow to Contra Costa County Line	Amend in new project	2012	$ 47,755,000
Marin County							
Marin	MCTD	MRN090001	230252	Expand Marin County local bus service	Amend in new project	2010	$ 10,000,000
Marin	TAM	MRN090002	21030	Improve U.S. 101/I-580 interchange (project approval and environmental design phases only)	Amend in new project	2015	$ 11,000,000
Marin	TAM	MRN090003	21315	Signalize ramp intersections at U.S. 101/Miller Creek Road interchange	Amend in new project	2012	$ 1,200,000

County	Sponsor	TIP ID	RTP ID	Project name	Description of Change	Project Completion Date	Total Project Cost in the TIP
Marin	TAM	MRN090004	22437	Construct auxilliary lanes at various locations along U.S. 101	Amend in new project	2012	$ 5,000,000
Marin	TAM	MRN090005	22753	Construct park-and-ride lots to support regional express bus service	Amend in new project	2011	$ 5,000,000
Marin	TAM	MRN090006	98179	Improve U.S. 101/Tiburon Boulevard interchange	Amend in new project	2012	$ 20,000,000
Marin	TAM	MRN090007	230060	Implement Transit Priority Measures (TPM) on major transit corridors	Amend in new project	2012	$ 27,300,000
Marin	TAM	MRN090008	230418	Rehabilitate major roads of countywide significance	Amend in new project	2015	$ 30,000,000
Marin	TAM	MRN090009	230431	Intermodal Transit Hubs	Amend in new project	2011	$ 11,000,000
Marin	TAM	MRN090010	230549	Implement local arterial improvements parallel to U.S. 101	Amend in new project	2012	$ 10,000,000
Marin	TAM	MRN050034	230701	US 101 HOV Lanes - Marin-Sonoma Narrows (Marin)	Increase costs to match the RTP-2035 Funding amount	2015	$ 372,700,000
Regional							
MTC	Caltrans	REG090003	230419	Freeway Performance Initiative - Phase 1	Amend in new project	2015	$ 222,000,000
San Francisco County							
San Francisco	SFCTA	SF-090011	230517	Oakdale Caltrain Station	Amend in new project	2012	$ 50,000,000
San Francisco	SFCTA	SF-991030	94089, 98102	US 101 Doyle Drive Replacement	Amend scope to remove 'Tolling facilities' and project costs	2015	$ 954,847,000
San Francisco	SFDPW	SF-010038	21549	Bayview Transportation Improvements	Amend in CON phase	2015	$ 126,000,000
San Francisco	SFDPW	SF-090002	21549	Arterial Harney/Jamestown to Crisp	Amend in new project	2015	$ 57,000,000
San Francisco	SFDPW	SF-090007	21549	Widen Cesar Chavez/Evans structure	Amend in new project	2015	$ 17,000,000
San Francisco	SFDPW	SF-090008	21549	Widen Illinois Street Bridge over Islais Creek	Amend in new project	2015	$ 25,000,000
San Francisco	SFDPW	SF-090004	230490	Widen Harney Way	Amend in new project	2012	$ 22,000,000

Appendix C
Travel Forecast Assumptions for the Transportation 2035 Plan and 2009 TIP Amendment #09-06

Travel Forecasting Assumptions for Conformity Analysis of Transportation 2035 Plan and 2009 Transportation Improvement Program/Amendment # 09-06

This report documents the travel forecasting assumptions for the 2009 Regional Transportation Plan (RTP), and includes the following analysis years: 2006, 2015, 2025, and 2035. The analysis is based on the "latest planning assumptions" as documented below. In addition, the current conformity analysis also uses the latest upgrades to the MTC travel demand forecast model, which was updated and re-validated to a 2006 base year in Spring 2008.

The vehicle travel forecasts from the MTC travel demand model are then used in conjunction with the California Air Resource Board's (ARB) motor vehicle emission model (EMFAC2007) to estimate total regional on road motor vehicle emissions.

In preparing these travel forecasts, MTC uses four basic sets of assumptions:

- Pricing Assumptions;
- Travel Behavior Assumptions;
- Demographic Assumptions; and
- Highway and Transit Network Assumptions.

Demographic and detailed highway and transit network definition assumptions are not included in this appendix. The RTP travel forecasts are based on the socio-economic/land use forecast series *Projections 2007*, developed by the Association of Bay Area Governments (ABAG). These projections reflect the new regional "Smart Growth" land use assumptions and have been approved for use in the conformity analysis by the US DOT and EPA, subject to periodic preparation of a monitoring report by ABAG to examine results and review assumptions used in the projections. The projections also reflect the near term effects of the current economic slowdown on job creation in the Bay Area.

Pricing assumptions include projected parking prices; gasoline and non-gasoline auto operating costs; fuel economy; bridge tolls; and transit fares.

Travel behavior assumptions include trip peaking factors, vehicle occupancy factors, and estimates of interregional commuters.

Additional travel forecasting methodology issues are addressed in this report. These are special methodological issues related to air quality and mobile source emissions inventories. The methodology issues include:

- Commercial Vehicle Methodology;
- Speed Post-Processing Methodology;
- Distribution of VMT by Speed Methodology; and
- Adjustment of Regional VMT and Trips.

I. Pricing Assumptions

A. Parking Costs (Table 1)

The MTC demand models were estimated using nominal, or posted parking prices as opposed to actual parking prices. Actual parking prices would be the average parking price paid by a consumer, weighted by those who are subsidized by their employer and those who are not subsidized by their employer. For peak period parking cost, the monthly posted parking price is divided by 22 days per month to derive an average workday parking cost. The average workday parking cost is then divided by 8 hours to derive an average peak hour parking cost per hour in 1990 cents. In the home-based work mode choice model application, the per hour charge is multiplied by 8 hours, then divided by 2, to derive a per vehicle trip charge. Next, the per vehicle trip charge is divided by the vehicle occupancy so that parking costs are equally distributed between vehicle drivers and passengers.

Estimates for the years 2000 and 2035 peak hour and off-peak per hour parking costs are shown in Table 1. Data is shown for only the travel analysis zones with non-zero parking costs. This table also shows the change in net employment density, and the estimate of average monthly commuter parking costs, in 2008 current dollars.

The off-peak parking costs (per hour) are generally higher than the peak parking costs (per hour) since the peak parking costs are based on the discounted monthly parking rates, divided by 22 work days per month, divided by 8 hours per workday. The off-peak parking costs are reflective of mid-day, regular, not discounted parking costs.

The MTC assumption for parking costs is that they will change, in real terms, by the ratio of the net total employment density in the target year to the net employment density in the base year (2000).

MTC staff periodically inventory parking garages throughout the Bay Area to monitor trends in parking prices. The most recent update to this inventory was conducted fall 2000.

Auto Operating Costs (Table 2, 3, Figures 1, 2)

The MTC travel demand models are based on non-linear auto operating costs which vary according to trip speed and distance. As speed increases, the fuel consumption rate (gallons per mile) decreases linearly. As distance increases, the share of "cold start" fuel consumption decreases. This internal model is used to derive trip-specific fuel economy (miles per gallon) which is multiplied by the per gallon gas price to derive per trip gasoline operating cost. A constant non-gasoline operating cost per mile is multiplied by trip distance to get per trip non-gas cost. Total auto operating cost per trip is the sum of the gasoline cost per trip plus the non-gasoline cost per trip plus any bridge tolls or parking charges. Details on the auto operating cost model are included in the BAYCAST Users Guide (August 2004).

The MTC auto operating cost model is based on work conducted by Cambridge Systematics, Inc., as part of the *Urban Transportation Energy Conservation* study, published in 1978 (known as "UTEC"). The UTEC models were also used to derive auto operating costs for the Southern California Association of Governments' current set of travel demand models.

The basic inputs to the BAYCAST model system, in terms of auto operating cost, are gasoline price (in 1990 constant dollars); the fuel correction factor (to represent fleet turnover and more fuel efficient vehicles); and the non-gasoline operating cost (in 1990 cents per mile.) Data on historical, 1990 to 2008, and assumed future year auto operating costs are detailed in Table 3 and Figures 1 and 2.

This is the most challenging set of forecasting assumptions given the radical and recent escalation of gas prices over the 2008 calendar year. According to the AAA, late May 2008 gas prices range from $4.18 per gallon of regular unleaded in the North Bay to $4.23 in San Francisco. In the previous month (April 2008), gas prices ranged from $3.90 per gallon in the North Bay to $4.00 per gallon in San Francisco [http://www.fuelgaugereport.com/CAmetro.asp]. The United States Energy Information Administration (EIA) is showing national gas prices, for the week of 5/26/08, ranging from a low of $3.83 per gallon in Texas to $4.17 per gallon in Chicago, with a national average of $3.94 per gallon. From May 2007 to May 2008, the average national gas price increased from $3.21 per gallon to $3.94 per gallon, a 23 percent increase in 12 months.
[http://www.eia.doe.gov/oil_gas/petroleum/data_publications/wrgp/mogas_home_page.html]

To take into account recent gas price increases, MTC tested several linear regression models based on historical gas prices reported by the US Bureau of Labor Statistics (BLS). Data from April 1988 through April 2008 was used to produce various regression results, as shown in Table 2. Regressions based on 20 years of gas price data (1988-2008) would predict a $4.14/gallon gas price by the year 2035 (in today's dollars). The regression based on the past five years of gas price data (2003-2008) would extrapolate to $11.02/gallon by the year 2035 (again, in today's 2008 dollars).

MTC is using the 10-year regression model, based on published gas prices from April 1998 through April 2008, for the future year 2035 gas price (see Table 2 and Figure 1). This is $7.47 per gallon in today's dollars. This is comparable to current European petrol prices, which range from $4.70 per gallon in Estonia to $8.43 per gallon in Norway. (The closest to this $7.47 estimate is Germany, currently at $7.64/gallon, or 1.37 euros/liter.)

Gas price assumptions were finalized in late May 2008. Subsequent gas price data, published by the US Bureau of Labor Statistics, show that Bay Area gas prices peaked in June 2008 ($4.50/gallon), falling slightly to $4.49 per gallon in July, and settling back to $3.87 per gallon in September 2008 (see Figure 2).

The other major factor to consider in auto operating costs is the average fuel economy. MTC staff has estimated that the overall Bay Area fuel economy will increase from 19.86 miles per gallon in 2006 to 32.15 miles per gallon in 2035. This is based on MTC staff analysis of EMFAC2007 databases and models supplied by the California Air Resources Board (CARB), and takes into account the Pavley Phase I and Pavley Phase II regulations. MTC staff analysis shows that Pavley Phase I would increase Bay Area fuel economy to 27.91 mpg; and Pavley Phase II would further increase the overall fuel economy to 32.15 mpg. Note that these estimates are for light duty auto (LDA), small light duty trucks under 8,500 pounds (LDT1) and small light duty trucks over 8,500 pounds (LDT2).

The increase in overall fuel economy is a striking 59 percent increase between 2006 and 2035 (see Table 3). The increase in fuel economy is almost offset by the 76 percent real increase in gas price assumed between 2008 and 2035, such that the overall auto operating cost per mile is projected to increase by just 10 percent, from 20.9 cents/mile (2008$) to 23.2 cents/mile (2008$). This appears comparable to current European and Japanese-level gasoline prices and fuel economy.

The following table summarizes the horizon year auto operating cost assumptions used in MTC regional transportation planning activities over the past ten years. It is useful in showing the usefulness and need to re-evaluate latest planning assumptions on an ongoing basis.

Planning Study	Horizon Year	Gas Price (4/08$)	Fuel Economy (mpg)	Gas Price per Mile (4/08$)
1998 RTP	2020	$1.86	21.9	8.5 cents/mile
2001 RTP	2025	$2.26	21.9	10.3
2005 RTP	2030	$2.26	21.9	10.3
Vision 2035	2035	$3.93	27.7	14.2
Current, 2008	*2008*	*$4.20*	*20.1*	*20.9*
2009 RTP	2035	$7.47	32.2	23.2

The other key assumption is that non-gasoline operating cost (maintenance and repair, motor oil, parts, accessories) is 40 percent of total auto operating costs. This 40 percent figure is based on US Bureau of Labor Statistics data on consumer expenditures (see Table 4 of the MTC report: *Consumer Price Indices: Bay Area & U.S. Cities: 1950-2001*.) In a typical household, between five and six percent of a household's expenditures are related to auto operating costs. Gasoline cost has fluctuated from 55.6 percent to 73.5 percent of total auto operating costs over the past twenty years.

Auto ownership costs, which now comprise around 7.3 percent of the average household's budget, are not used in determining trip running, or variable costs. Auto ownership costs includes the cost of new or used vehicle purchasing and financing, insurance premiums, and vehicle registration and licensing fees. These fixed costs of auto ownership are more important in determining the number and quality of vehicles to own or lease. Given the difficulty in projecting automobile quality and costs, household income is used as a surrogate in predicting auto ownership levels.

C. Bridge Tolls (Table 4, Figure 3)

Year 2008 bridge tolls are used for all future year forecasts. This means that tolls will increase with inflation, so that their real value is not eroded.

Bay Area voters approved Regional Measure 2 on the March 2, 2004 general election. This measure increased the toll on all Bay Area state-owned bridges from $2.00 to $3.00 as of July 1, 2004. Since 1998, drivers on all Bay Area state-owned bridges have paid a $1 seismic surcharge to help finance a seismic retrofit program to strengthen and reinforce bridge structures and roadways on five of the bridges in the event of a major earthquake. On January 1, 2007 the seismic surcharge increased to $2 per vehicle, resulting in the current, $4.00 per passenger vehicle toll.

In previous conformity analyses, toll cost assumptions assumed no further increase in tolls, with the value of the toll decreasing, in real dollar terms, with an assumed inflation rate. For the 2009 Regional Transportation Plan, MTC is now assuming that tolls for Bay Area bridges will keep pace with inflation, similar to the standard assumption that transit fares will keep pace with inflation. Bay Area state-owned bridge tolls are assumed to remain at $4.00 (in 2008 current dollars) for the duration of the long-range planning period (Table 4, Figure 3).

This means that tolls will increase to about $4.89 per passenger vehicle in 2015, to $6.50 per passenger vehicle by 2025, and to $8.66 per passenger vehicle by 2035. These dollar values are in current dollar terms, and reflect a 2.9 percent per year annual inflation assumption.

For purposes of travel forecasting, the one-way toll is halved so that both directions on every bridge are allocated one-half of the total average toll. This is a technical necessity to counter the toll collection direction bias.

D. Transit Fares (Table 5, Figures 4.1, 4.2, 4.3)

Year 2008 transit fares are used for all future year forecasts. This means that fares will increase with inflation, so that their real value is not eroded. This assumption is borne out by past fare trends, and reflects the ongoing need for transit operators to periodically adjust their fares to keep up with increased labor costs, maintain their local contribution to capital replacement projects, and pay for increases in the cost of fuel and other supplies.

Changes in Bay Area transit operator fares, 1998 to 2008, are summarized in Table 5. Transit fares in place as of June 1, 2008 were used as the base assumption for all 2009 RTP forecasts.

Historical and projected base fares are charted in Figure 4.1 (Muni), Figure 4.2 (AC Transit), and Figure 4.3 (BART). These charts show base transit fares in current and 1990 constant dollars. The current dollar fares are based on a 2.9 percent per year increase in consumer price indices through the Plan forecast period.

II. Travel Behavior Assumptions

A. Vehicle Peaking Factors (Tables 6, 7)

A new methodology introduced in the 2009 Regional Transportation Plan is intended to produce better estimates of "congested" travel times and speeds by time period for an average weekday. Previous work focused on generating estimates of AM peak period congested travel times and speeds; and free-flow travel times and speeds. This new methodology produces consistent estimates of congestion and VMT for five time periods of the day.

The standard output of the travel demand modeling system is daily person trips by trip purpose and travel mode. The in-vehicle person trips are converted into daily vehicle driver trips using either simple factors (1.0 for drive alone trips; 2.0 for shared ride two-occupant trips; 3.5 for shared ride three-or-more-occupant trips), or using the "vehicle driver" mode that is the standard output in the non-home-based and school trip mode choice models.

Daily vehicle trips are then split into vehicle trips for five time periods:

- Early Morning (0000-0600 military time);
- AM Peak (0600-1000);
- Midday (1000-1500);
- PM Peak (1500-1900); and
- Evening (1900-2400).

Peaking factors by trip purpose by time-of-day are derived from the Year 2000 Bay Area Travel Survey (BATS2000). The base year peaking factors used in the 2000 and 2006 base year forecasts are summarized in Table 6. The column labeled "purpose/direction" provides details on the trip purpose (HBW is home-based work) and direction (e.g., H2W is the home-to-work, W2H is the work-to-home direction).

The BAYCAST system directly simulates the number of AM peak period home-to-work vehicle trips, derived from the home-to-work departure time choice model. This is basically a "peak spreading" model that will predict fewer trips in the peak period when congestion levels increase.

Previous applications of the MTC home-to-work departure time choice model show a 6.8 percent reduction in the share of home-to-work trips occurring in the AM peak period, comparing 2006 to earlier 2035 forecasts. This result was then applied to both the AM and the PM peak period factors, shown in Table 6, to derive the time-of-day factors for forecast years, summarized in Table 7. To compensate for the 6.8 percent reduction in the share of trips occurring in the AM and PM peak periods, the peaking factors for the early morning, midday, and evening periods were increased so that all trips would be accounted for on a daily basis.

B. Interregional Commuters

Assumptions about the number of interregional commuters is key in two respects: first, intraregional home-based work productions and attractions need to be adjusted to reflect in-commuting and out-commuting from and to Bay Area jobs and households; second, interregional vehicle trips are needed to augment the intraregional trips included in the standard BAYCAST travel demand models. Interregional trips were updated to reflect Census 2000 journey-to-work data and commuter sketch planning forecasts.

Interregional commuters are estimated by factoring the Census 2000 journey-to-work data file using a 46-by-46 matrix that comprises the 34 Bay Area superdistricts and the 12 Bay Area neighbor counties. These sketch planning commuter forecasts are prepared for the years 2010, 2020 and 2030 and interpolated and extrapolate for conformity analysis years. This is basically a "sketch planning" effort to complement the formal models used to predict intraregional personal and intraregional commercial travel.

III. Demographic Assumptions

MTC used ABAG's Projections 2007 forecasts (adopted December 2006) for future year population and employment assumptions and for the geographic distributions of residents and jobs throughout the region.

For use in MTC's travel demand model, MTC combines and allocates ABAG's tract-level forecasts to MTC's 1454 regional travel analysis zone system for all years.

MTC summaries of the ABAG Projections 2007 databases, at the county and MTC 34 superdistrict level, are available on MTC's FTP site, at: ftp://ftp.abag.ca.gov/pub/mtc/planning/ZoneData/Proj2007/

IV. Transportation Network Assumptions

A major part of the RTP conformity analysis is the definition of highway, transit, and pedestrian/bicycle networks for various analysis years. These networks describe the supply of transportation capacity and various service characteristics that influence travel behavior.

Projects assumed in the transportation network for the various analysis years are listed in Appendices B of this conformity report.

Transit operator service levels have significantly changed between 2000 and 2008, due to the economic decline and the need to reduce service on some routes. The most extensive service level changes were to SamTrans and AC Transit District (Newark, Union City routes), Golden Gate and SCVTA.

V. Commercial Vehicle Methodology

The MTC BAYCAST commercial vehicle models are based on the truck trip generation models developed for Caltrans and Alameda County as part of the 1992 I-880 Intermodal Corridor Study; and truck trip distribution models documented in the 1996 report "Quick Response Freight Manual" produced by the US Department of Transportation (usable truck trip distribution models were not developed for the I-880 Intermodal Corridor Study).

These truck models are specifically limited to larger trucks of six-or-more tires. There are three sub-purposes to the MTC truck models: 1. "Small Trucks" (two-axle, six-tire vehicles); 2. "Medium Trucks" (three-axle vehicles); and 3. "Combination Trucks" (four-or-more axle vehicles).

Beginning in 2004, MTC has introduced a "very small, two-axle four-tire" commercial vehicle truck trip purpose. The "very small truck" trip model is borrowed from the Phoenix, Arizona MPO, as documented in the FHWA "Quick Response Freight Manual." Before 2004, these very small truck trips were indirectly estimated by increasing non-home-based vehicle trips.

The following sidebar summarizes the MTC BAYCAST truck trip generation and distribution models, including the very small truck trip models:

Garage-Based Truck Trip Production Models
Two-Axle Truck Productions = 0.011 * MFGEMP + 0.014 * RETEMP + 0.0105 * SEREMP + 0.046 * OTHEMP
Three-Axle Truck Productions = 0.0014 * MFGEMP + 0.00012 * RETEMP + 0.0037 * OTHEMP
Four-+-Axle Truck Productions = 0.0044 * MFGEMP + 0.0027 * SEREMP + 0.0084 * OTHEMP

Garage-Based Truck Trip Attraction Models
Two-Axle Truck Attractions = 0.0234 * TOTEMP
Three-Axle Truck Attractions = 0.0046 * TOTEMP
Four-+-Axle Truck Attractions = 0.0136 * TOTEMP

Non-Garage-Based Truck Trip Production & Attraction Models
Two-Axle Truck Productions and Attractions = 0.0324 * TOTEMP
Three-Axle Truck Productions and Attractions = 0.0039 * TOTEMP
Four-+-Axle Truck Productions and Attractions = 0.0073 * TOTEMP

Very Small Truck Trip Production & Attraction Models
Productions = 0.251 * TOTHH + 1.110 * AGREMP + 0.938 * MFGEMP +
0.938 * TRDEMP + 0.888 * RETEMP + 0.437 * SEREMP + 0.663 * OTHEMP2
Where:
MFGEMP = Manufacturing Employment
RETEMP = Retail Employment
SEREMP = Service Employment
OTHEMP = Other Employment (Wholesale Trade, Agriculture/Mining, Other)
AGREMP = Agricultural + mining Employment
TRDEMP = Wholesale Trade Employment
OTHEMP2 = Other Employment (Agriculture/Mining + Other)
TOTEMP = Total Employment
TOTHH = Total Households

Truck Trip Distribution Models: Gravity Models based on AM Peak Period Travel Time
Two-Axle Truck Trip Distribution Friction Factor: $FF_{ij} = \exp(-0.08 * TT_{ij})$
Three-Axle Truck Trip Distribution Friction Factor: $FF_{ij} = \exp(-0.1 * TT_{ij})$
Four-+-Axle Truck Trip Distribution Friction Factor: $FF_{ij} = \exp(-0.03 * TT_{ij})$
Very Small Truck Trip Distribution Friction Factor: Built off of NHB trip distribution model

In terms of mobile source emissions inventories, the MTC estimates of mobile source emissions are based on the "default" vehicle type and vehicle technology mix assumed by the California Air Resources Board (CARB) in their EMFAC/BURDEN model series. The CARB assumptions on vehicle type mix are based on the same Caltrans databases and truck counts as used by MTC in model validation, only adjusted by CARB staff to conform to the weight-based vehicle classes needed as input to the EMFAC emission factor models.

VI. Traffic Assignment Methodology (Table 8)

The MTC BAYCAST models were updated and re-validated to a 2006 base year in Spring 2008. A major part of this effort was the validation of traffic assignments to observed daily traffic volumes, and observed AM peak period traffic volumes and speeds on Bay Area freeways.

Previous conformity analyses required a speed post-processing methodology to correct for overly fast expressway and arterial speeds. This speed post-processing methodology has been eliminated in the forecasts from 2004 to the present, and replaced with a consistent set of speeds used in all model components. What was formerly the "post-processing" methodology is now the "main processing" methodology. This means that reduced free-flow arterial and expressway speeds that were only incorporated in a post-processing traffic assignment stage are now used throughout the MTC model system: as inputs to the trip distribution, mode choice, as well as traffic assignment stages.

The standard set of speed-flow models used in the MTC model system includes an MTC variation on the "BPR" curve, and application of the "Akçelik" speed-flow curve documented in previous MTC research. The "MTC Breakdown Curve" is used for freeways and freeway-to-freeway segments; the "Akçelik Curve" is used for expressways, collectors, freeway ramps, major arterials and metered ramps.

MTC assumptions of per lane capacity and free-flow speed are "lookup" tables based on facility type (freeway, major arterial, etc.) and area type (rural, suburban, etc.) Area types are based on "area density,"

a combined measure of population and employment density. Current and former sets of free-flow speeds are shown in Table 8.

The following box summarizes the MTC standard and post-processing set of speed-flow models.

MTC Standard & Post-Processing Set of Speed-Flow Models

MTC Breakdown Curve (Freeways & Freeway-to-Freeway Facilities)

$t = t_o * (1 + 0.20 * ((x)/0.75)^6)$

Akçelik Curve (All Other Facilities)

$t = t_o + \{0.25 * T * [(x-1) + ((x-1)^2 + (16 * Ja * L^2/T^2))^0.5]\}$

where:
t = average travel time per unit distance (hours/mile)
t_o = free-flow travel time per unit distance (hours/mile)
T = flow period, i.e., the time interval in hours during which an average arrival (demand) flow rate, v, persists
Q = capacity
x = the degree of saturation, i.e., v/Q
Ja = the delay parameter (Expressway = 0.2, Collector=1.2, Freeway Ramp=0.17, Major Arterial=0.4, Metered Ramp=0.2)
Ja = the delay parameter (Post-Processing = calculated for each facility type, area type combination, where: Ja = (Tc – To)^2 / L^2 and "Tc" is the critical speed at V/C ratio of 1.0)
L = Link length (miles)

Significant changes to traffic assignment methodology from previous conformity analyses include the following two improvements:

1. Traffic assignment equilibration "convergence criteria" was tightened up as a result of the project level performance analyses. Traditional MTC traffic assignment practice has been to use the "default closure convergence criteria" included in the MTC network software package (Cube/Voyager), which is "GAP=0.005." After discussions with other professionals, and extensive testing, MTC staff converted to a more stringent "relative gap" closure criteria, with a "RELGAP=0.001". This results in about a 3 percent decrease in peak period vehicle hours of delay. More information is available in an April 2008, MTC powerpoint presentation: "The Urge to Converge: Minding the Gap in Voyager Traffic Assignment" (April 2008).
2. Peak spreading assumptions were used in new procedures for time-of-day-based, daily traffic assignments. Traditional MTC daily traffic assignment practice (before 2008) was to assign AM and PM peak period trips to an "all-or-nothing" basis on congested AM travel times; and all of the off-peak period trips, on an "all-or-nothing" basis, to free flow travel times, to derive average daily traffic volumes on the regional networks. MTC replaced this approach with a set of daily traffic assignments, using an equilibrium traffic assignment methodology, for five time periods: early morning (0000-0600 military time); AM peak period (0600-1000); midday (1000-1500); PM peak period (1500-1900); and evening (1900-2400). This means that we have "congested" speeds for all five time periods of the average weekday. In addition to this improvement, we used information from the MTC home-to-work time-of-day choice model, which shows that the share of regional home-to-work trips occurring in the two-hour AM peak period is projected to decrease by 6.8 percent between 2006 and 2035. We used this 6.8 percent decrease to downwardly adjust the share of vehicle trips occurring in both the AM and the PM peak periods, and to upwardly adjust the share of vehicle trips occurring in the three "off-peak" periods. This is a significant change which tends to "flatten the peak periods" for the AM and PM peak period traffic assignments, and to show increased congestion in other time periods, mostly the midday and evening periods.

VII. Adjustment of Regional VMT and Trips Methodology

Regional VMT and engine starts (needed for emission calculations) are forecasted using a combination of output from MTC's travel demand forecasting model and base year (1999) VMT information provided by the California Air Resources Board (ARB). The ARB base year VMT comes from the State Bureau of Automotive Repair's (BAR) biennial inspection/maintenance odometer records for registered Bay Area

vehicles. MTC then "grows" this VMT consistent with the growth in VMT projected in MTC's regional travel model forecasts.

The BAR-based VMT will over-estimate Bay Area VMT by including Bay Area-registered vehicle travel occurring outside the nine-county region. The BAR-based VMT method will also not include Bay Area VMT by non-resident vehicular travel occurring inside the nine-county region. ARB considers that these anomalies offset each other, and that the resulting regional VMT level is a conservatively high value. In comparison, MTC estimates 140,116 thousand VMT per weekday in year 2000. The 1999 ARB estimates, based on BAR inspection/maintenance data, shows 157,359 thousand VMT per weekday.

For conformity purposes, MTC agreed to follow ARB's protocol for estimating VMT. Using MTC growth estimation data, the 1999 ARB VMT estimate was adjusted to establish a new 2000 ARB baseline VMT estimate for mobile source emission inventory calculations in the Bay Area. MTC calculated that the ARB estimated VMT in year 2000 is 164,073. For comparative purposes, below is a table showing the differences in MTC and ARB's VMT estimates from the 2001 RTP and 2007 TIP. These year 2000 estimates have not been updated for the 2009 RTP.

Base Year 2000, Average Weekday Daily VMT

	2001 RTP	**2007 TIP**
ARB	159,642*	164,073
MTC	134, 256	140,116
% Difference	-16%	-15%

*Source: San Francisco Bay Area-EMFAC2000

MTC used the 2000 ARB baseline VMT of 164,073 to develop VMT estimates for the remaining analysis years – 2006, 2007, 2015, 2025, and 2035. Annual compounded growth rates were then updated and applied to generate regional VMT totals for this conformity analysis.

Regional VMT Growth Rates for the 2009 RTP Conformity Analysis

Analysis Year Time Frame	MTC Model VMT	Percent Change	Annual Growth Rate
2000-2006	2006 = 144,985	3.47%	0.6%
2006-2015	2015 = 158,374	9.23%	1.0%
2015-2025	2025 = 174,843	10.40%	1.0%
2025-2035	2035 = 191,456	9.50%	0.9%

Regional engine starts (which generate event-specific emissions) are based on ARB's estimate of approximately 6.72 to 6.75 engine starts per vehicle per day. This 6.75 engine starts per day value is based on a small-scale survey of instrumented Sacramento-area vehicles conducted by ARB. This contrasts to other Bay Area, California and National surveys that show trip rates ranging from 2.5 to 3.5 vehicle trips per vehicle per day. For more discussion on this engine starts per vehicle issue, refer to the November 24, 1999 letter from the MTC to the California Air Resources Board. ARB and MTC have also agreed to continue working on this issue.

VIII. Distribution of VMT by Speed Methodology (Table 9-12)

An important input to ARB's EMFAC 2007 mobile source emissions inventory model are county-level files of the share of vehicle miles travel by speed cohort, by time of day. Data is produced for 13 speed cohorts and 5 time-of-day periods (0000-0600, 0600-1000, 0900-1500, 1500-1900 and 1900-2400). Regional average weekday daily totals of VMT by the 13 speed cohorts for 2006, 2015, and 2035 are summarized and charted in Table 9. These VMT values include intra-zonal VMT and terminal distance VMT. Regional average weekday VMT by time-of-day by the 13 speeds cohorts for 2006, 2015 and 2035 are also summarized and charted in Tables 10 through 12.

The first step in preparing the VMT-by-speed share file is the preparation of daily traffic assignments by the five time periods.The “loaded” daily highway network with congested speeds and volumes for the five time periods are then exported into text files and subsequently imported into SAS (Statistical Analysis System) for further post-processing. Daily assignment volumes are then multiplied by link distance to yield vehicle miles of travel (VMT) by link, which are in turn summarized at the county-of-occurrence by speed-cohort level by the five time periods of the day, and average weekday daily totals.

There are three components of regional VMT: interzonal VMT that is assigned to highway networks; intra-zonal VMT that is not assigned to highway networks; and terminal distance VMT that is not assigned to highway networks.

Intra-zonal vehicle trips are not assigned to highway networks. The VMT associated with intra-zonal vehicle trips is derived by exporting the intra-zonal vehicle trips and intra-zonal door-to-door distance data into a format compatible with SAS, and for merging with the daily traffic assignment SAS files. Intra-zonal VMT is approximately 7.2 to 7.5 percent of regional VMT in 2000 and in future years. SAS routines are then used to apply the “terminal distance” vehicle miles of travel to the inter-zonal and intra-zonal VMT. “Terminal distance” VMT is defined as the amount of travel from the “average household” or “average activity location” in a travel analysis zone to the nearest highway link represented in the regional highway networks.

These speed distributions were then applied to passenger cars (PC), light-duty trucks (T1, T2), medium-duty trucks (T3), and motorcycles (mcy) in EMFAC 2007. EMFAC2007 model defaults were used on all other vehicle types and times of day.

Table 1
Peak and Off-Peak Parking Cost Assumptions by Bay Area Regional Travel Analysis Zones
Parking Costs in 1990 cents per hour

zone	City	Neighborhood	Peak Parking Costs, 2000	Off-Peak Parking Costs, 2000	Net Employment Density, 2000	Net Employment Density, 2035	Ratio of 2035 to 2000 Net Employment Density	Peak Parking Costs, 2035	Off-Peak Parking Costs, 2035	Year 2035 Commuter Cost/Month (2008$)
1	San Francisco	Financial District	160	525	1,397.9	1,493.3	1.068	171	561	$505.78
2	San Francisco	Financial District	160	525	1,372.1	1,563.5	1.140	182	598	$539.50

Table 2
Linear Regression on Bay Area Gas Prices, 1988-2008

Model #	Time Period	Duration	Model	Year 2035 Gas Price (4/08$)
1	4/88 - 4/08	20 years	y = 0.4431 x + 158.91	$4.14
2	4/90 - 4/08	18 years	y = 0.5047 x + 166.33	$4.39
3	4/95 - 4/08	13 years	y = 0.8906 x + 159.69	$5.87
4	**4/98 - 4/08**	**10 years**	**y = 1.3237 x + 158.91**	**$7.47**
5	4/00 - 4/08	8 years	y = 1.5456 x + 176.82	$8.26
6	4/03 - 4/08	5 years	y = 2.3314 x + 206.76	$11.02

Highlighting indicates regression model selected

where:

x = months elapsed, relative to beginning of time period

y = future year gas price, in 4/2008 cents

Source data is average retail gasoline price in Bay Area, from US BLS.

 # - Costs are in 2008 current dolllars

Inflation Assumption (2008 - 2035) = *2.90%*

Notes:
1. Future non-gasoline operating cost based on assumption that it is 60% of auto gasoline cost.
2. Inflation assumption is based on compounded Bay Area inflation rate, 1990-2007 (216.0/132.1 ^ (1/17)) = 2.9%/year.
3. Future year estimates prepared 5/30/2008

Notes:
1. For the 1998 RTP, fares as of February 1998 were used. For the 2001 RTP, fares as of May 2001 were used. For the 2005 RTP/TIP, fares as of March 2004 were used.
2. Transit fares are from MTC records, and the Web site: http://www.511.org/
3. Caltrain fares are based on a 10-ride ticket book.
4. For the 2009 RTP, transit fares as of 6/1/2008 are used.

	Over-The-Road	1M8PDMPAO3PO55683	11/8/2002	Golden Gate	72 Santa Rosa/Rohnert Park/Cotati/San Francisco	3:54 AM - 8:59 AM & 2:12 PM - 8:05 PM	
	Over-The-Road	1M8PDMPA23PO55684	11/8/2002	Golden Gate	75 Santa Rosa/Rohnert Park/Cotati · Petaluma /Marin Civic Center/San Rafael	5:02 AM - 8:35 AM & 2:59 PM - 7:18 PM	
	Over-The-Road	1M8PDMPA43PO55685	11/8/2002	Golden Gate	75 Santa Rosa/Rohnert Park/Cotati · Petaluma /Marin Civic Center/San Rafael	5:02 AM - 8:35 AM & 2:59 PM - 7:18 PM	
LAVTA	Suburban	15GDD271521110872	3/25/2002	LAVTA	70X Pleasanton - Walnut Creek Express	5:09 AM - 9:16 AM & 3:19 PM - 7:42 PM	
	Suburban	15GDD271721110873	3/25/2002	LAVTA	70X Pleasanton - Walnut Creek Express	5:09 AM - 9:16 AM & 3:19 PM - 7:42 PM	
	Suburban	15GDD271921110874	3/25/2002	LAVTA	70X Pleasanton - Walnut Creek Express	5:09 AM - 9:16 AM & 3:19 PM - 7:42 PM	
	Suburban	15GDD271021110875	3/25/2002	LAVTA	70X Pleasanton - Walnut Creek Express	5:09 AM - 9:16 AM & 3:19 PM - 7:42 PM	
NCTPA	Suburban	15GCD201631111911	1/27/2003	SamTrans Transfering to NCPTA on 2/28/09	June 2009 - Calistoga/Yountville/Napa/American Canyon/Baylink Ferry Terminal	5:00 AM-6:30 PM; Peak Only	
	Suburban	15GCD201831111912	1/27/2003	SamTrans Transfering to NCPTA on 2/28/09	June 2009 - Calistoga/Yountville/Napa/American Canyon/Baylink Ferry Terminal	5:00 AM-6:30 PM; Peak Only	
Tri-Delta	Over-The-Road	1M8PDMPA63P055686	11/8/2002	Tri-Delta	300 Express Commuter Service Brentwood/Pittsburg BART	4:15 AM - 9:07 PM	
	Over-The-Road	1M8PDMPA63P055687	11/8/2002	Tri-Delta	300 Express Commuter Service Brentwood/Pittsburg BART	4:15 AM - 9:07 PM	
	Over-The-Road	1M8PDMPA63P055688	11/8/2002	Tri-Delta	300 Express Commuter Service Brentwood/Pittsburg BART	4:15 AM - 9:07 PM	
	Over-The-Road	1M8PDMPA63P055689	11/8/2002	Tri-Delta	300 Express Commuter Service Brentwood/Pittsburg BART	4:15 AM - 9:07 PM	
Vallejo	Over-The-Road	1M8PDMPA13P055627	11/14/2002	Leased to Fairfield-Suisun[5]	90 Fairfield/El Cerrito Del Norte BART	4:55 AM - 10:35 PM	
	Over-The-Road	1M8PDMPA33P055628	11/14/2002	Leased to Fairfield-Suisun[5]	90 Fairfield/El Cerrito Del Norte BART	4:55 AM - 10:35 PM	
	Over-The-Road	1M8PDMPA53P055629	11/14/2002	Vallejo	78 Vallejo/Benicia/Pleasant Hill BART/Walnut Creek BART	5:00 AM - 8:38 PM	
	Over-The-Road	1M8PDMPA13P055630	11/14/2002	Leased to Fairfield-Suisun[5]	90 Fairfield/El Cerrito Del Norte BART	4:55 AM - 10:35 PM	
	Over-The-Road	1M8PDMPA33P055631	11/14/2002	Leased to Fairfield-Suisun[5]	90 Fairfield/El Cerrito Del Norte BART	4:55 AM - 10:35 PM	
	Over-The-Road	1M8PDMPA53P055632	11/14/2002	Vallejo	78 Vallejo/Benicia/Pleasant Hill BART/Walnut Creek BART	5:00 AM - 8:38 PM	
	Over-The-Road	1M8PDMPA73P055633	11/14/2002	Vallejo	78 Vallejo/Benicia/Pleasant Hill BART/Walnut Creek BART	5:00 AM - 8:38 PM	
	Over-The-Road	1M8PDMPA93P055634	11/14/2002	Vallejo	78 Vallejo/Benicia/Pleasant Hill BART/Walnut Creek BART	5:00 AM - 8:38 PM	
	Over-The-Road	1M8PDMPA03P055635	11/14/2002	Vallejo	78 Vallejo/Benicia/Pleasant Hill BART/Walnut Creek BART	5:00 AM - 8:38 PM	
	Over-The-Road	1M8PDMPA23P055636	11/14/2002	Leased to Fairfield-Suisun[5]	90 Fairfield/El Cerrito Del Norte BART	4:55 AM - 10:35 PM	
	Over-The-Road	1M8PDMPA43P055637	11/14/2002	Leased to Fairfield-Suisun[5]	90 Fairfield/El Cerrito Del Norte BART	4:55 AM - 10:35 PM	
	Over-The-Road	1M8PDMPA83P055639	11/14/2002	Leased to Fairfield-Suisun[5]	90 Fairfield/El Cerrito Del Norte BART	4:55 AM - 10:35 PM	
WestCat	Suburban	15GCD211121111974	3/7/2002	WestCat	30Z Hercules Transit Center/Martinez/BART	5:59 AM - 8:03 PM	
	Suburban	15GCD211521111975	3/7/2002	WestCat	30Z Hercules Transit Center/Martinez/BART	5:59 AM - 8:03 PM	
	Suburban	15GCD211121111976	3/7/2002	WestCat	30Z Hercules Transit Center/Martinez/BART	5:59 AM - 8:03 PM	
	Suburban	15GCD201X31111913	1/27/2003	WestCat - Transferred from SamTrans[4]	LYNX Rodeo/Hercules/San Francisco Transbay Terminal	5:00 AM - 9:45 AM & 3:30 PM - 8:33 PM	
	Suburban	15GCD201131111914	1/27/2003	WestCat - Transferred from SamTrans[4]	LYNX Rodeo/Hercules/San Francisco Transbay Terminal	5:00 AM - 9:45 AM & 3:30 PM - 8:33 PM	
	Suburban	15GCD201331111915	1/27/2003	SamTrans[4]	LYNX Rodeo/Hercules/San Francisco Transbay Terminal	5:00 AM - 9:45 AM & 3:30 PM - 8:33 PM	

1. Please note: MTC does not currently have information compiled on cumulative operating hours for all of the TCRP buses. For projects where the buses have been assigned to routes receiving operating funds that are tied to required performance measures, MTC has data compiled on the annual performance of those routes.
2. Each vehicle may be deployed on any of the approved routes listed for each operator.
3. Vehicles are deployed as needed for various routes on weekdays and weekends. All transbay service does not operate on weekends, but all vehicles may be deployed on weekend transbay service.
4. SamTrans REX service was discontinued in 2007 due to low ridership; all 11 TCRP vehicles purchased for the REX service were reallocated to AC Transit, Fairfield-Suisun Transit, WestCat, and NCTPA.
5. Route 90 service was transferred from Vallejo to Fairfield-Suisun Transit in 2006.

TCM B: Bicycle/Pedestrian Program
TDA ARTICLE 3 [Transportation Development Act Funds for Bicycle and Pedestrian Projects]

	SPONSOR	PROJECT NAME	AMOUNT
FY 2003-04	Alameda County	ADA Compliant Accessible Ramps	$ 105,767
FY 2003-04	Alameda County	Tesla Road Bicycle Lanes	$ 51,000
FY 2003-04	City of Albany	Manor Way Pedestrian Improvements	$ 22,706
FY 2003-04	City of Berkeley	Bicycle Safety Education	$ 30,000
FY 2003-04	City of Berkeley	Prepare plan for implementing future	$ 31,033
FY 2003-04	City of Fremont	Bike Detectors, Bike Logo on Pavement,	$ 128,989

	Grand Total	**$ 31,289,732**

TCM D: Additional Freeway Service Patrol

The Bay Area FSP is a joint project of the Metropolitan Transportation Commission Service Authority for Freeways and Expressways (MTC SAFE), the California Highway Patrol (CHP) and the California Department of Transportation (Caltrans). The service is provided by private tow truck companies, selected through a competitive bid process, under contract to MTC SAFE. During the hours of operation, the vehicles and drivers are exclusively dedicated to patrolling their freeway beat. The program is intended to augment the MTC SAFE network of motorist-aid call boxes in the nine Bay Area counties.

Current Profile (as of February 2009)
A fleet of 83 trucks patrols some 550 miles of the Bay Area's freeways. Patrol routes are selected based on several factors, including a high rate of traffic and congestion, frequent accidents or stalls, and lack of shoulder space for disabled vehicles.

The FSP tow trucks operate primarily during morning and afternoon commute hours, generally from 6 a.m. to 9 a.m. or 10 a.m. and from 3 p.m. to 6 p.m. or 7 p.m., Monday through Friday. Weekend service is provided in Napa, as well as seasonally along Highway 17, and in some other locations on Sunday.

FSP tow trucks are equipped for nearly any contingency. In addition to the standard auto repair and towing equipment, they carry 5 gallons of diesel fuel, 5 gallons of unleaded gasoline, and 5 gallons of water, as well as an external speaker and public address system.

Funding
The tow trucks are financed with federal, state and local moneys. Local funds come from the MTC SAFE, which is financed by a $1 annual vehicle registration fee in participating counties. The service costs approximately $7 million a year to operate. Another $2 million is invested in sophisticated communications equipment, including an automatic vehicle location system that enables CHP and Caltrans to monitor the location of the trucks and improve dispatching efficiency.

Implementation Plan
See the attached Implementation Plan, which is also available at:
http://www.fsp-bayarea.org/implementation_plan/Iplan.pdf

Service Adjustments
See attached document for service adjustments overtime since June 2003 through December 2006.

SFO Service Changes Over Time

Below is a list and description of service changes that have been implemented since the San Francisco Extension opening on June 22, 2003 through December 31, 2006. Some of these changes are major system changes. Other changes are more minor involving train sizing.

June 22, 2003 - SFO Initial Service

Bay Point trains provide service to Millbrae during all hours of operation, all week. Dublin trains provide service to the San Francisco Airport (SFO) during all hours of operation, all week. These routes operate on 15 minute headways during the weekday, and on 20 minute headways during evenings and on weekends. A shuttle train provides service between Millbrae and SFO on 20 minute headways during all hours of operation, all week. In addition to the base 15 minute service, three AM peak period rush trains provide service from Bay Point to Daly City, then operate express from Daly City to SFO. These three trains return during the evening peak period and operate express from SFO to Daly City, then on to Bay Point.

1. Direct service to/from Millbrae and direct service to/from SFO
2. Peak rush trains provide Bay Point line passengers direct service to/from SFO during the peak periods
3. 20 minute shuttle does not synch with the 15 minute base service during the day

February 9, 2004

Bay Point trains provide direct service to SFO, then continue to Millbrae. On the return trip these trains follow the same route back to Bay Point. This service route has been called the "Reverse L" service because the shape of the service on the SFO extension resembles a backward or reverse "L" shape. During the 3-1/2 hour AM and PM peak period on weekdays, Richmond trains provide direct service to Millbrae, then continue to SFO. On the return trip these trains follow the same route back to Richmond. This service route is referred to as the "L" service. The Richmond trains do not operate on the weekend. When the Richmond trains are operating on the extension during the week the Bay Point trains terminate at SFO and do not continue to Millbrae. At all other times (off-peak, evenings and weekends) the Bay Point trains complete the "Reverse L" service pattern. There are no other direct peak period rush trains. Service during the day (and during the peak rush) is 15 minutes, while evenings and weekends operate at 20 minute headways.

1. Provides for direct service on all extension routes to Millbrae and SFO, no need to transfer
2. 20 minute shuttle (during normal 15 minute service) replaced by 15 minute direct trains
3. During off-peak, evenings and weekends, direct service to Millbrae is through the SFO station

March 8, 2004

Train sizing adjustments: Train 361 increased from 4 to 5-car train off-peak. Train 441 changed to 10-car peak size for all PM trips instead of breaking to 5-car train on last trip. Other minor adjustments were made to the 200s and 500s.

September 13, 2004

Bay Point trains provide direct service to SFO, then continue to Millbrae. This service provides "Reverse L" service and operates during all hours of operation, all week. During the 3 hour AM and PM peak period on weekdays, Richmond trains provide direct service to SFO, then continue to Millbrae in a "Reverse L" service configuration. During the 3 hour AM and PM peak period (weekdays only) the Richmond and Bay Point trains both provide service directly to and from Millbrae/SFO. The Richmond trains do not operate on the weekend. Service during the day on each route (and during the peak rush) is 15 minutes, while evenings and weekends operate at 20-minute headways.

1. Provides for direct service on all extension routes to Millbrae and SFO, no need to transfer

2. During all hours, direct service to Millbrae is through the SFO station (but is effectively every 7.5 minutes during the 3 hour AM and PM peak periods)

December 13, 2004
Train sizing adjustments were made to better match capacity with demand, generally to shorter trains.

April 23, 2005
Train sizing adjustments: The 300 series trains on Saturday were increased from 8 to 9-car trains.

June 13, 2005
Train lengths were generally shortened to an 8-car plan in two phases, in June and August, 2005, with peak size trains running all day on the Bay Point line.

August 15, 2005
Second phase of implementing the "8-car" plan.

September 12, 2005
Dublin trains provide direct service to SFO, then continue to Millbrae in a "Reverse L" service configuration. Only the Dublin trains will provide service to the extension on weekdays and weekends. Richmond and Bay Point trains will truncate at Daly City. Service during the day (and during the peak rush) is 15 minutes, while evenings and weekends operate at 20-minute headways. Although direct service from Bay Point has been replaced with this new service, the transfer time from a Bay Point base train to SFO train (from Dublin) is only 3-4 minutes in each direction.

September 22, 2005
Extend service from Richmond and lengthen trains. Up to six consists will be lengthened from 4 to 8-car trains. Richmond trains to Daly City will be extended to Colma for two hours in the morning and two hours in the evening.

October 10, 2005
The following adjustments were made:

Weekday
100s - three trains lengthened
200s - one train lengthened, Make/Break timing changed
300s - several trains lengthened with a few trains reduced in size
400s - one train lengthened
500s - No change since September 22, 2005 (Make/Break timing)

Saturday
300s - some trains lengthened

Sunday
300s - some trains lengthened

December 5, 2005
The following adjustments were made:

Weekday
100s – 115 becomes the last AM Break train
300s – Train 323 and 363 increased from 8-car to 9-car trains

Saturday
200s – All trains are now 6-car trains during the day

January 30/31, 2006e
The following adjustments were made:

Weekday
100 Series Trains (net +1)
Train 101 +1 (9 to 10 cars) peak increase
Train 115 off peak increase 4 to 5 cars

200 Series Trains (net 0)
No change

300 Series Trains (net –2)
Train 365 off peak decrease only on dispatches of 20:58, 22:19, and 23:38
Train 367 +1 (9 to 10 cars) off peak decrease only on dispatches of 21:18, 22:39, and 24:00
Train 371 –1 (10 to 9 cars)
Train 377 –1 (10 to 9 cars)
Train 381 –1 (10 to 9 cars)
Train 331 -2 (10 to 8 cars)
Train 335 +2 (8 to 10 cars)

400 Series Trains (net +2)
Train 443 –1 (9 to 8 cars) for AM peak period only
Train 445 +1 (8 to 9 cars)
Train 453 –1 (9 to 8 cars) for PM peak period only
Train 455 +2 (8 to 10 cars) and off peak increase 4 to 5 cars

500 Series Trains (net +10)
Train 501 +1 (8 to 9 cars) peak increase and off peak increase 4 to 5 cars
Train 503 +1 (8 to 9 cars) peak increase and off peak increase 4 to 5 cars
Train 505 +1 (8 to 9 cars) peak increase
Train 507 +1 (8 to 9 cars) peak increase
Train 509 +1 (8 to 9 cars) peak increase
Train 511 +1 (8 to 9 cars) peak increase
Train 513 +1 (8 to 9 cars) peak increase and off peak decrease 8 to 5 cars
Train 519 +1 (8 to 9 cars) peak increase
Train 521 +1 (8 to 9 cars) peak increase and off peak increase 4 to 5 cars
Train 523 +1 (8 to 9 cars) peak increase

Saturday
100s – no change
200s – no change
300s – All 8-car trains are now 9-car trains
400s – no change
500s – Four trains increased from 4 to 5-cars (501, 505, 511, and 515)

Sunday
200s – no change
300s – no change
500s – All trains 9-car midday and some offpeak increased from 4 to 5-cars (503, 505, and 515)

Comments on the Draft Conformity Analysis

Transportation Solutions Defense and Education Fund

P.O. Box 151439 San Rafael, CA 94915 415-460-5260

January 20, 2009
By E-Mail

Steve Heminger, Executive Director
Metropolitan Transportation Commission
101 Eighth Street
Oakland, CA 94607

Re: Draft Conformity Analysis

Dear Steve:

The Transportation Solutions Defense and Education Fund, TRANSDEF, is pleased to offer the following comments on the Draft Conformity Analysis for the Transportation 2035 Plan and the 2009 TIP Amendment #09-06:

The Dumbarton Rail Corridor Phase 1 is an element of Phase 2 of TCM 4 in the Bay Area 2005 Ozone Strategy. The proposed transfer of $91 million in RM 2 funding for the construction phase of this project will affect the timing of the implementation of TCM 4. Unless there is a commitment to the timely replacement of these funds by the time the project is ready for construction, MTC will have interfered with the Air District's statutory responsibility to implement "all feasible measures" to reduce ozone. While not directly related to the proposed Conformity Findings of timely TCM implementation, MTC's proposed funding action will have a significant impact on the commitments of a sister agency.

As regards the TIP Amendment, what due diligence has been performed on the cost estimate for the "BART Warm Spring to San Jose Extension" (sic) project that makes up over half of the Grand Total of $11.69 billion of projects being added to the TIP? What was the year of the cost estimate that was escalated into $6.1 billion in Year of Expenditure dollars? Can MTC confirm that this is the most recent cost estimate? We are aware that VTA completed 65% design-level cost estimates last year, which were witheld from the public during the campaign for Santa Clara County's Measure B.

In looking at Appendix B, the listing of projects is very heavily front-loaded. It seems highly unlikely that so many projects can be "Complete and Operational by 2015." Please advise as to whether the phasing of projects will affect the model outputs for the various analysis years enough to change the Conformity Analysis.

We believe a better choice for the gasoline price assumption used in modelling would be the result from the 5 year linear regression model. This 5 year period has had far greater gas price volatility than the 10 year period that was chosen for the Conformity Analysis and RTP EIR. We expect gas prices to fluctuate much more in the future than they have in the past, due to the clash between the flattening of global oil production and exponentially growing demand.

The issue here is not accurate prediction--the issue is risk management, and making sure that MTC has created the most resilient plan possible to enable Bay Area residents to cope with large changes in the cost of transportation. Please remember that many consider the root of the current home foreclosure crisis to be the extraordinary jump in gasoline prices, which made mortgages unaffordable for many when coupled with the high cost of commuting from the urban fringe.

We are pleased to see that MTC has agreed with our suggestion that bridge tolls should escalate with inflation, in the same manner as transit fares are escalated.

We raise again the comment we have raised in past plans: Using VMT derived from ARB data sources places larger traffic volumes into speed buckets for the EMFAC model than are derived from the model at equilibrium. We therefore don't have confidence in the emissions projections, because we don't believe that these traffic volumes can physically occur as modelled.

We never accepted the MTC assertion that the programming of funds for the Express Buses under TCM A constitutes full implementation of the TCM. Knowing that "the buses ordered … will be redeployed in alternate services" is inadequate for us. Please provide a listing of where the Express Buses purchased under TCM A have been deployed, as well as the number of vehicle revenue hours each of them has accumulated.

Table 6 is incorrect when it comes to TCM E. Changes in service to Millbrae and other Peninsula stations on the BART SFO extension bring into question whether TCM E is still fully implemented. Please provide a complete narrative of changes in service on the SFO extension, and correct the statement "Service was maintained through 2006 and is continued."

Thank you for this opportunity to comment on the Draft Conformity Analysis.

Sincerely,

/s/ DAVID SCHONBRUNN

David Schonbrunn,
President

Appendix F
Methodology for Bay Area Conformity Determinations

Winston H. Hickox
Agency Secretary

Air Resources Board

Alan C. Lloyd, Ph.D.
Chairman
1001 I Street • P.O. Box 2815 • Sacramento, California 95812 • www.arb.ca.gov

Gray Davis
Governor

November 30, 2001

Mr. Wayne Nastri
Regional Administrator
U.S. Environmental Protection Agency
Region IX
75 Hawthorne Street
San Francisco, California 94105

Dear Mr. Nastri:

The Air Resources Board (ARB/Board) hereby transmits the Bay Area emission factor model (SF Bay Area-EMFAC 2000) to the U.S. Environmental Protection Agency (U.S. EPA) for approval and use in the 2001 San Francisco Bay Area State Implementation Plan (Bay Area SIP) and subsequent Bay Area conformity determinations.

SF Bay Area-EMFAC 2000 is tailored specifically to the San Francisco Bay Area. The emission factors contained in SF Bay Area-EMFAC 2000, along with updated activity data from the Metropolitan Transportation Commission (MTC), provide the basis for the mobile source emissions budgets in the 2001 Bay Area SIP. SF Bay Area-EMFAC 2000 will be used for subsequent Bay Area conformity determinations. At a public meeting on November 1, 2001 the ARB Board approved SF Bay Area-EMFAC 2000 for these purposes following a 30-day public notice. At the time the Bay Area SIP was being developed, this model was the most current emission factor model available. SF Bay Area-EMFAC 2000 was based on EMFAC2000. The documentation for EMFAC2000 was publicly available beginning in May 2000 and made available for use by the Bay Area Air Quality Management District when it began developing the 2001 Bay Area SIP in November 2000.

The three Bay Area co-lead agencies responsible for developing the Bay Area SIP have committed to do a mid-course review of the Bay Area SIP by December 31, 2003 and revise the 2001 SIP by March 2004. ARB has committed to submit the revised Bay Area SIP to U.S. EPA by April 15, 2004. The mid-course review will use the most current emission factor model available at that time to develop the mobile source emissions budgets. This model will be EMFAC2001 or its successor.

This transmittal provides documentation of the emission factors and activity data used in SF Bay Area-EMFAC 2000 to develop the 2001 Bay Area SIP. In addition, it includes the methodology ARB will be using to conduct Bay Area conformity determinations.

SF Bay Area-EMFAC 2000 Emission Factor Model Documentation

Comparison between MVEI7F/7G and SF Bay Area-EMFAC 2000

The emission factors used in the SF Bay Area-EMFAC 2000 emission factor model represent a major improvement over emission factors used in older models such as MVEI7F and MVEI7G. SF Bay Area-EMFAC 2000 exhaust hydrocarbon emission rates are significantly higher than the emission rates included in the older models. The increase in exhaust hydrocarbon rates is mainly a result of the following changes:

- More accurately reflecting real-world driving by using the Unified Cycle (UC) driving cycle rather than the Federal Test Procedure (FTP);
- Using new speed adjustment factors to better reflect how emissions change as average driving speeds change;
- Representing 45 model years, rather than only 35; and
- Incorporating new vehicle test data.

Evaporative hydrocarbon emission rates in SF Bay Area-EMFAC 2000 are also significantly higher than the older models' emission rates. The most important changes causing the increase in evaporative hydrocarbon emission rates include:

- Higher hot soak emission rates, especially for older catalyst-equipped vehicles;
- Higher running loss emission rates, based on new data; and
- Including emissions for vehicles with liquid fuel leaks.

Emission rates for oxides of nitrogen (NOx) are also significantly higher in SF Bay Area-EMFAC 2000 than in the older models. The increased estimates of NOx emission rates are primarily due to the following changes:

- Inclusion of "off-cycle NOx" (i.e., NOx emissions that were not represented in the certification driving cycle); and
- Incorporation of new vehicle test data for catalyst equipped passenger cars and light trucks.

Incorporation of Latest Standards

SF Bay Area-EMFAC 2000 also includes the effects of recently adopted standards on the emissions of the on-road fleet. The future year emission rates in SF Bay Area-EMFAC 2000 reflect the adopted standards described below.

<u>Supplemental Federal Test Procedure</u>
Two supplemental test procedures to the FTP were adopted by the Board in July of 1997. These new standards are applicable to passenger cars, light-duty trucks, and medium-duty vehicles weighing 8,500 pounds or less. These standards require the

control of excess emission of hydrocarbon and oxides of nitrogen during “off-cycle” operations (high speed and hard acceleration), and excess emissions associated with the use of air conditioning. The new standards are to be phased-in between 2001 and 2005.

Low Emission Vehicles (LEVII)

The second phase of Low Emission Vehicle Standards (LEVII) was adopted by the Board in November of 1998. This action imposed more stringent hydrocarbon, carbon monoxide, NOx and exhaust particulate matter emissions standards for passenger cars, light-duty trucks and medium-duty vehicles up to 14,000 pounds sold in California beginning in 2003.

Near Zero Evaporative Standards

Also in November 1998, the Board adopted new standards for the emissions of evaporative hydrocarbons (diurnal, hot soak and resting loss). The standards were reduced from 2 grams per test (hot soak plus diurnal) for passenger cars, to 0.5 grams per test.

New On-Road Motorcycle Standards

In December of 1998, the Board adopted lower exhaust emission standards for on-road motorcycles. These standards, which may require future motorcycles to utilize catalytic converters, are applicable to new motorcycles sold in California beginning in 2004.

Off-Cycle NOx Mitigation

In a settlement reached between the federal government, the Air Resources Board and heavy-duty engine manufacturers, several mitigation measures were agreed to regarding off-cycle NOx emissions. In addition to ending the practice of defaulting to an advanced timing condition during extended cruise operation, several manufacturers have agreed to perform “low emission” rebuilds for in-use engines. These rebuilds will lower the emissions of the in-use fleet.

New Exhaust Emissions Standards for Urban Transit Buses

In February of 2000, the Board adopted a regulation that allows transit agencies the choice between either a diesel or alternative fuel “path” to lower emissions. Beginning in 2002, over the course of 10 years, this regulation requires increased introduction of

cleaner engine buses in transit agencies' fleets, use of cleaner diesel fuel, retrofits to reduce exhaust particulate matter (PM) emissions from older diesel buses, and use of zero-emission buses (ZEBs).

Public Review

The emission factors used in SF Bay Area-EMFAC 2000 were developed in a 3-year process and were subject to public review and comment during three workshops held in 1998, 1999, and 2000. Throughout the comment period, ARB received a number of written and verbal comments, which were addressed in the development of the emission factor model.

Further detail regarding the development of the SF Bay Area-EMFAC 2000 emission factor model may be found in the attached Technical Support Documentation. The Technical Support Documentation refers to broader work on the statewide EMFAC2000 emission factor model, but also applies to the region specific SF Bay Area-EMFAC2000.

Activity Data Documentation

The Bay Area vehicle miles traveled (VMT), VMT growth rates, and VMT-speed distributions incorporated into SF Bay Area-EMFAC 2000 represent the best current activity data estimates available. The derivation of these estimates are explained below.

Vehicle Miles of Travel

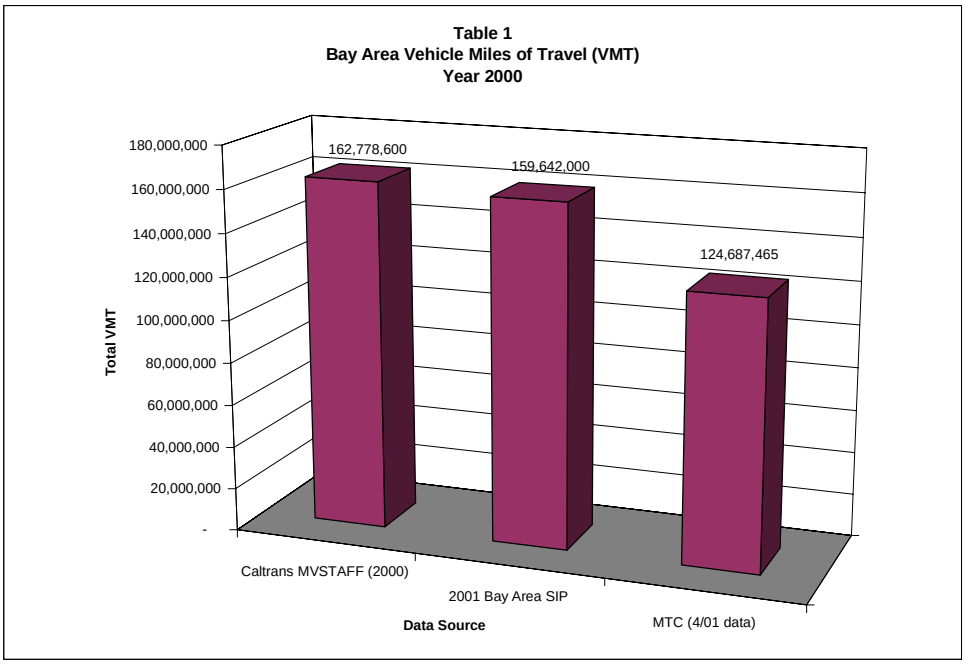
Bay Area VMT estimates for calendar year 2000 are based on the ARB VMT estimation methodology using mileage accrual rates derived from Smog Check odometer data and Department of Motor Vehicle vehicle populations (see Section 7 of the attached Technical Support Documentation for further detail on the ARB VMT estimation methodology).

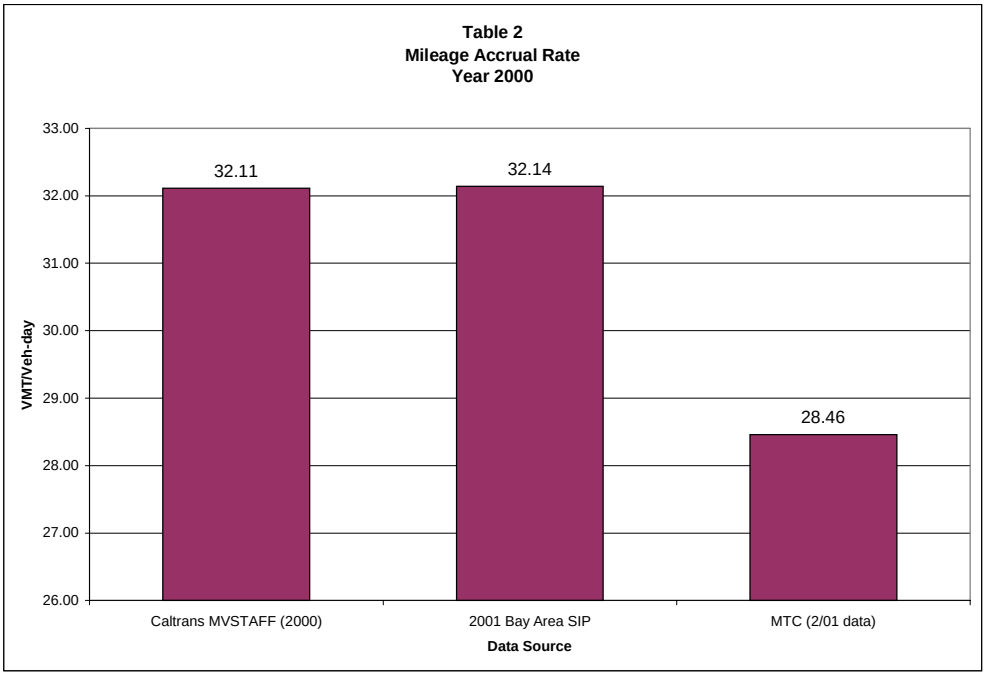
The decision to use ARB's VMT estimate instead of the VMT estimate from MTC's BAYCAST-90 travel demand model for calendar year 2000 was made in an agreement between MTC and ARB. As Table 1 illustrates, MTC's 2000 VMT estimate for the region is about 22 percent lower than both ARB and Caltrans' estimates. The ARB and Caltrans[1] methods for estimating VMT were developed independently of each other, yet fall within 1 percent of each other.
Additional justification for using the ARB VMT estimation methodology is found in the estimate of the number of miles driven by each vehicle per day (i.e., the mileage accrual

[1] Caltrans' VMT estimate was taken from the annual "Motor Vehicle Stock, Travel, and Fuel Forecast" (MVSTAFF) report. The MVSTAFF report forecasts statewide VMT based on statewide vehicle population data from the DMV, fuel consumption estimates from the Board of Equalization, and fuel economy estimates derived from the national fuel economy standards. Statewide VMT estimates are then disaggregated to the county level using county auto registration and road system mileage ratios.

rate). Table 2 compares mileage accrual rates from various data sources. MTC's estimates appear too low to be consistent with odometer readings collected in the Smog Check program. MTC's mileage accrual estimates are 11 percent lower than both Caltrans' ARB's estimates for the Bay Area.

For the purposes of the 2001 Bay Area SIP, MTC agreed to use ARB's 2000 VMT estimate. It was also agreed that the difference in VMT between ARB's and MTC's calendar year 2000 VMT estimates would be used as a "correction" for all future analysis years.





VMT Growth Rates

In the agreement between ARB and MTC, ARB agreed to use MTC's VMT growth rate as implied by the VMT estimates produced by BAYCAST-90. The rationale for this is that while ARB questions the level of travel in calendar year (CY) 2000 as estimated by MTC's travel demand model, ARB is not questioning future year growth projections included in the travel demand model.

VMT-Speed Distributions

The final pieces of activity data provided by MTC and incorporated into SF Bay Area-EMFAC 2000 are the VMT-speed distributions for two calendar years (2000 and 2005). Based on consultation between MTC and ARB staff, ARB incorporated the VMT-speed distributions into SF Bay Area-EMFAC 2000 by applying CY2000 speed distributions to CYs 2000-2003, and CY2005 speed distributions to CYs 2004+.

Methodology for Bay Area Conformity Determinations

For all Bay Area conformity determinations based on the mobile source emissions budgets set in the Bay Area SIP (using SF Bay Area-EMFAC 2000), the following step-wise methodology will be followed:

1. MTC will submit to ARB updated VMT-speed distributions and updated VMT estimates by county for all relevant analysis years. ARB will follow the procedures below for analysis years for which MTC does not submit new activity data (i.e. for which activity data does not change from MTC's original SIP submittal):
    - ARB will use the speed distributions submitted by MTC for the most recent calendar year prior to the analysis year of interest. For example, if MTC submits new VMT-speed distributions for 2005 and 2010, but not for the 2006 analysis year, the 2006 analysis year will use the speed distributions submitted for 2005. VMT-speed distributions will not be interpolated.
    - The VMT estimate for each county will be interpolated using county-specific compounded growth rates.[2] The interpolated VMT will then be used for the following steps.

2. ARB will calculate VMT for the portions of Sonoma and Solano Counties that fall in the San Francisco (S.F.) Air Basin. This is necessary since the SIP budgets are based on the S.F. Air Basin (which covers only the southern portions of Solano and Sonoma Counties), while the MTC VMT estimates include the full nine Bay Area counties. The county portions will be calculated by multiplying the full county VMT submitted by MTC by the VMT ratio (partial county/county) derived from SF Bay Area-EMFAC 2000.[3] In year 2000, about 71 percent of Solano County, and 77 percent of Sonoma County VMT occurred in the S.F. Basin.

3. ARB will calculate the year 2000 difference in VMT between the VMT estimate included in the SF Bay Area-EMFAC 2000 runs[4] and the VMT estimate submitted by MTC for conformity.[5] The resulting differences by county represent the VMT "correction" between ARB and MTC's VMT estimates.

4. The VMT correction will be added by county to the submitted VMT for all analysis years, resulting in the "target" VMT estimate that will be used for the conformity modeling runs.[6]

---

[2] For example, 2006 VMT is interpolated from 2005 and 2010 VMT estimates submitted by MTC by the following equation: $VMT_{2006} = (VMT_{2010} / VMT_{2005})^{0.2} * VMT_{2005}$

[3] For the S.F. Basin portions of Solano and Sonoma County VMT:
S.F. Basin County Portion VMT_{MTC} = [S.F. Basin County Portion $VMT_{SFBayArea\text{-}EMFAC2000}$ / Total County VMT $_{SFBayArea\text{-}EMFAC2000}$] * Total County VMT_{MTC}

[4] SF Bay Area-EMFAC 2000 calculates VMT based on Smog Check odometer readings and DMV vehicle registration data for light duty vehicle classes, and instrumented truck data for the truck classes.

[5] VMT $correction_{county\ a}$ = SIP VMT_{CY2000} – MTC VMT_{CY2000}

[6] Target $VMT_{county\ a}$ = MTC $VMT_{county\ a}$ + VMT $correction_{county\ a}$

5. The county-specific target VMT in the conformity modeling runs will be achieved in SF Bay Area-EMFAC 2000 by modifying the county-specific vehicle populations in SF Bay Area-EMFAC 2000 using the What-if-Scenario (WIS) option. Since vehicle population and VMT are linearly related in SF Bay Area-EMFAC 2000, to obtain the "target" vehicle population, ARB staff will take the ratio between the SIP VMT estimates and the target VMT for each analysis year and apply them to the SIP vehicle population estimates for each respective analysis year.[7]

6. Once the target vehicle populations have been calculated, ARB staff will run SF Bay Area-EMFAC 2000 using the WIS option to adjust vehicle populations by county, and incorporate any updated speed distributions.

7. ARB staff will then apply control factors to the model output to adjust for emission reduction measures not included in the SF Bay Area-EMFAC 2000 emission factor model or changed since the model was developed.

8. Finally, ARB staff will compare the results to the SIP budgets for the conformity demonstration.

If you have questions regarding this submittal, you may contact me at (916) 445-4383, or have your staff contact Ms. Cynthia Marvin, Chief of the Air Quality and Transportation Planning Branch, at (916) 322-7236.

Sincerely,

/s/

Recommended Methods for Use of EMFAC2002 To Develop Motor Vehicle Emissions Budgets and Assess Conformity

As the agency charged with estimating motor vehicle emissions for air quality plans, the Air Resources Board (ARB) has improved the EMFAC modeling tool for use in combination with estimates of vehicle population and activity to develop motor vehicle emissions budgets and assess transportation conformity. The most recent version of this tool, EMFAC2002, has been transmitted to the U.S. Environmental Protection Agency (U.S. EPA) for approval for use in State Implementation Plans (SIPs) and conformity assessments. This paper describes the recommended practices for ARB, air districts, metropolitan planning agencies (MPOs) and regional transportation planning agencies (RTPAs) to use vehicle activity in conjunction with EMFAC2002 emission rates to calculate emissions budgets and conduct conformity assessments.

The vehicle activity indicators commonly used to develop emissions inventories are vehicle trips and vehicle miles of travel (VMT) by speed, vehicle class and time of day. Though not a direct measure of travel activity, vehicle population may also be a variable for these purposes, as described below.

Vehicle trips. In California, MPOs and RTPAs use demographic forecasts and travel demand models to develop estimates of current and future daily VMT, daily vehicle trips and average travel speeds for links in the transportation network. ARB separately estimates daily vehicle trips, but defines trips as the number of times a vehicle is started, rather than a number of specific daily destinations. This distinction is important; ARB and U.S. EPA studies find that vehicles are started five to six times per day, while trips associated with destinations as reported through travel surveys and predicted in travel demand models occur three to four times per day. Because start emissions and the duration of time between starts are crucial to emissions estimation, ARB equates vehicle trips with vehicle starts. Though EMFAC2002 permits model users to alter estimates of vehicle trips used to estimate emissions, ARB recommends that the model's default estimates of vehicle trips (starts), developed from instrumented vehicle studies, be used for air quality planning and conformity purposes.[1] Alternatively, for vehicle classes where appropriate local data are made available for review through the interagency consultation process, use of trip factoring or other methods to fully account for vehicle starts may be employed. Such alternative approaches should be discussed in the interagency consulation process.

[1] An exception would occur when a user chooses to factor these start-based trips to account for trip reduction programs. EMFAC2002 start-based trips rather than destination-based trips should serve as the baseline for this adjustment. The adjustment would be made through the What-If Scenario (WIS) function of EMFAC2002 as follows, where TRS denotes the trip reduction scenario:

*WIS Input TRS Trips = EMFAC Default Trips * (RTPA TRS Trips / RTPA Baseline Trips)*

Vehicle speeds. Most travel demand models provide output of estimated average speed by time period and link that may be summarized for use in EMFAC2002. For each major vehicle class and up to 24 hourly time periods, total VMT is divided into 13 different speed "bins" (5 mph through 65 mph) and used as input to EMFAC2002. ARB recommends continuation of this current practice to develop emissions budgets and assess conformity. Travel from intrazonal trips should be assigned to the appropriate speed bin based on the speed assigned to that travel in the travel demand model. VMT for each speed bin and time period can be used as input through the WIS function of EMFAC2002. It is also possible to input this data specific to vehicle class if adequate and defensible local data are available.

Vehicle population. Vehicle trips (starts) in EMFAC2002 are estimated as a function of the number of vehicles, or vehicle population, by county. The population of each class of motor vehicle is estimated and forecast from Department of Motor Vehicles (DMV) registration data. EMFAC2002 assumes there is a relationship between vehicle population and VMT, carried through mileage accrual rates.[2] In the default case, the model assumes *vehicle population * mileage accrual = VMT.* ARB-preferred practice is to maintain this internal consistency, for reasons explained below.

Vehicle miles of travel. Daily VMT is both an emissions model input usually provided by MPOs/RTPAs and a model output used to estimate exhaust emissions. ARB staff reviews MPO/RTPA estimates of VMT and vehicle speeds, and supports these estimates for use in air quality plans whenever we agree they are reasonable and defensible. Use of the latest estimates of MPO/RTPA VMT and speeds in plan development facilitates the subsequent federal transportation conformity process. This is particularly important for any year for which the plan creates emissions budgets, as conformity rules allow no emissions budget exceedance, regardless of how small. As there may be some variance between default EMFAC2002 VMT and more recent MPO/RTPA estimates to be used for SIP development, we are recommending a procedure to more exactly incorporate into emissions budgets revised VMT estimates for emissions budget analysis years.

Although it is possible to directly input VMT into EMFAC2002 through the model's WIS function, it is generally not recommended to do this independent of vehicle population because of the desire to properly estimate start and evaporative emissions tied to the size of the vehicle fleet. A change in total forecasted miles of travel implies a change either in the number of vehicles traveling those miles or in mileage accrual rates. For future years, we generally recommend making vehicle population the variable, rather than mileage accrual. Thus, VMT adjustment would usually occur through vehicle population adjustment in the model's WIS function, according to this formula:

*WIS Input Population = EMFAC Default Population * (RTPA VMT / EMFAC Default VMT)*

[2] Accrual rates are miles traveled per year as a function of vehicle age, derived from the Bureau of Automotive Repair Smog Check database as described in Section 7.1 of the EMFAC2000 Technical Support Document, found via http://www.arb.ca.gov/msei/on-road/latest_revisions.htm#pcaccrual.

The result of this modification is that emissions estimates more precisely incorporate the daily VMT provided by each MPO/RTPA to calculate exhaust emissions, and vehicle population is adjusted for consistency with this assumption of higher or lower VMT, providing similarly modified start and evaporative emissions.[3] Though the emissions impact of using this approach will often be small, we believe the approach is appropriate given the desire to fully reflect the impacts of changes in travel activity on all emissions processes. Use of consistent methods in air quality plans and conformity assessments will both reduce potential conformity problems and preserve the integrity of the SIP and conformity processes.

Alternatively, local data may indicate that changes in VMT are tied more closely to changes in household or business rates of travel than to changes in vehicle ownership. Or, improved travel demand modeling may project auto ownership rates with a high degree of confidence. In such cases it may be appropriate to adjust total mileage accrual rather than vehicle population. It is also possible to derive a modified VMT forecast from adjustments to both variables in EMFAC2002. Planning agencies are encouraged to present alternative approaches for consideration in the interagency consultation process.

Recommendations

1. ARB recommends that the EMFAC2002 default estimates of vehicle trips, based on starts per day, be used for SIP development and conformity purposes. Model defaults for trips may be factored to account for trip reduction scenarios, but should not be replaced with estimates that do not account for all vehicle starts. Alternative approaches, such as the factoring of travel demand model trip outputs for appropriate classes to account for additional starts, may be considered through interagency consultation.

2. We recommend continuation of current practices for input of latest speed distributions for SIPs and conformity assessments. Travel from intrazonal trips should be assigned to the appropriate speed bin based on the speed assigned to that travel in the travel demand model.

3. To fully reflect the impacts of modified VMT forecasts on all emissions processes, in the calculation of SIP emissions budgets, and in the assessment of conformity with those budgets, vehicle population should be adjusted in EMFAC2002 proportional to the estimated VMT change. Local circumstances may alternatively support adjustment of mileage accrual rates, subject to interagency consultation.

[3] After adjusting VMT through use of the population variable in the WIS function of EMFAC, a user who desires to match VMT even more exactly (to the mile instead of the tens of miles) can then adjust VMT in the WIS without disturbing the population adjustment. This is unlikely to have a discernible impact on emissions, however.

ABSTRACT

Resolution No. 3891

This resolution finds that the Transportation 2035 Plan and 2009 Transportation Improvement Program, as amended by Amendment #09-06, are in conformance with the federal air quality plan, which is also referred to as the State Implementation Plan (SIP), to achieve National Ambient Air Quality Standards.

RE: Approval of the Final Transportation Air Quality Conformity Analysis of the Transportation 2035 Plan and 2009 Transportation Improvement Program/Amendment #09-06

METROPOLITAN TRANSPORTATION COMMISSION
RESOLUTION NO. 3891

WHEREAS, the Metropolitan Transportation Commission (MTC) is the regional transportation planning agency for the San Francisco Bay Area pursuant to Government Code Section 66500 et seq.; and

WHEREAS, MTC is the designated Metropolitan Planning Organization (MPO) for the nine-county San Francisco Bay Area region (the region); and

WHEREAS, MTC has updated its long-range regional transportation plan, the Transportation 2035 Plan, to be approved on April 22, 2009 (MTC Resolution 3893); and

WHEREAS, MTC has amended the 2009 Transportation Improvement Program (TIP) through Amendment #09-06, to be approved on April 22, 2009 (MTC Resolution 3875, Revised); and

WHEREAS, the Transportation 2035 Plan and the 2009 TIP, as amended through Amendment #09-06, must conform to the federal air quality plan, which is also referred to as the State Implementation Plan (SIP); and

WHEREAS, inclusion of new regionally significant, non-exempt transportation projects in the TIP requires that MTC update the transportation conformity analysis for the TIP (the 2009 TIP was previously determined to conform to the SIP on May 28, 2008 by MTC Resolution No. 3876); and

WHEREAS, federal planning regulations also require a re-determination of the conformity for the entire TIP within six (6) months of adopting a new long-range regional transportation plan (40 CFR Section 93.104(c)); and

WHEREAS, MTC has conducted a transportation air quality conformity analysis for the Transportation 2035 Plan and 2009 TIP, as amended with Amendment #09-06, in accordance with U.S. Environmental Protection Agency (U.S. EPA) conformity regulations and the Bay Area Air Quality Conformity Protocol (MTC Resolutions No. 3757); and

WHEREAS, said conformity analysis is included as Attachment A of this resolution, and is incorporated herein as though set forth at length; and

WHEREAS, the conformity analysis has been circulated for 30-day public review period from January 9, 2009 through February 9, 2009; now, therefore be it

RESOLVED, that MTC makes the following conformity findings for the Transportation 2035 Plan and 2009 Transportation Improvement Program, as amended with Amendment #09-06:

(A) The conformity analysis was conducted consistent with U.S. EPA's transportation conformity regulations and with the Bay Area Air Quality Conformity Protocol (MTC Resolution No. 3757);

(B) The Transportation 2035 Plan and 2009 Transportation Improvement Program, as amendment with Amendment #09-06, provide for the timely implementation of transportation control measures (TCMs) pursuant to the applicable federal regulations;

(C) For carbon monoxide, motor vehicle emissions in the Transportation 2035 Plan and 2009 Transportation Improvement Program, as amended with Amendment #09-06, are lower than the transportation conformity budget in the SIP; and

(D) For Volatile Organic Compounds (VOC) and Nitrogen Oxides (NO_x), motor vehicle emissions in the Transportation 2035 Plan and 2009 Transportation Improvement Program, as amended with Amendment #09-06, are lower than the transportation conformity budget in the SIP.

RESOLVED, that Executive Director shall forward a copy of this Resolution to the U.S. Department of Transportation for its approval of MTC's conformity findings, along with a copy of the Transportation 2035 Plan and 2009 Transportation Improvement Program, as amended with Amendment #09-06, and to such other agencies as appropriate.

METROPOLITAN TRANSPORTATION COMMISSION

Scott Haggerty, Chair

The above resolution was entered into by the Metropolitan Transportation Commission at a regular meeting of the Commission held in Oakland, California, on April 22, 2009.
